## D\#ZZ-TF222-159E

SSMC

## Instruction Manual

## Reed type Auto switch - Rail mounting

Series D-A72(H) / D-A73(H) / D-A76H

## / D-A80(H) / D-A79W

The intended use of the auto switch is to detect and control the position of an actuator using magnetic detection.

## 1 Safety Instructions

These safety instructions are intended to prevent hazardous situations potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/ECC) ${ }^{11}$, and other safety regulations. SO 4414: Pneumatic fluid power - General rules relating to systems. ISO 4413: Hydraulic fluid power - General rules relating to systems.
IEC 60204-1: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots -Safety. etc.

- Refer to product catalogue, Operation Manual and Handling Precautions for SMC Products for additional information.

## A Caution $\left\lvert\, \begin{gathered}\text { Caution indicates a hazard with a low level of risk which, if }\end{gathered}\right.$ minor or moderate injury. <br> A Warning $\begin{aligned} & \text { Which, if not avoided, could result in death or serious iniuu }\end{aligned}$ <br> A Danger Danger indicates a hazard with a high level of risk which, if Danger indicates a a hazard with a high level of risk not avoided, will result in death or serious injury.

## A Warning

- Always ensure compliance with relevant safety laws and standards.
- All work must be carried out in a safe manner by a qualified person in compliance with applicable national regulations.
environment. There may be potential difficulties in industrial electromagnetic compatibility in other environments due to conducted or radiated disturbances.

[^0]2 Specifications

| Model | D-A72(H) | D-A73 |  | D-A76H |  | D-A80(H) |  | D-A79w |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## 4 instailation

### 4.1 Installation

- Do not install the product

## Warning

## been read and understood.

4.2 Design and Selection

1) Confirm the specifications.

Read the specifications carefully and use the product correctly. The specification range.
2) Take precautions when multiple actuators are used close together When multiple auto switch actuators are used in close proximity, magnetic field interference may cause the switches to malfunction.
3) Pay attention to the length of time that a swich
3) Pay andiate stroke position. When an auto switch is placed at an intermediate position of the stroke and a load is driven at the time the piston passes, the auto switch will operate, but if the speed is too great the operating time will be short ot operate correctly. The maximum detectable piston speed is:
$\mathrm{V}(\mathrm{mm} / \mathrm{s})=\frac{\text { Auto switch operating range }(\mathrm{mm})}{\text { Load operating time }} \times 100$
4) Keep wiring as short as possible

As the wire length to a load is increased, the inrush current at switch ON becomes greater, which may shorten the product life (the switch will stay constantly ON).
5) Pay attention to thection box when the wire length is 5 m or longe

1) Switches with an indical voltage drop of the switch.

If auto switches are connected in series, take note that there will be a large volt drop because of internal resistance in the LED's (refer o internal voltage drop in the auto switch specifications).
The voltage drop will be " $n$ "
Even though an auto switch operates normally, the load may not
operate.
In the same way, when operating below a specified voltage, although the auto switch may operate normally, the load may not
operate. Therefore, the formula below should be satisfied after operate. herefore, the formula below should be

$$
\begin{aligned}
& \begin{array}{c}
\text { Supply } \\
\text { voltage }
\end{array}
\end{aligned} \begin{aligned}
& \text { Internal volt drop } \\
& \text { of switch }
\end{aligned}>\begin{aligned}
& \text { Minimum operating } \\
& \text { voltage of load }
\end{aligned}
$$

voltage of load
2) If the internal resistance of an LED causes a problem, select a switch without an indicator light (Model D-A80(H)),
6) Do not use a load that generates a surge voltage. contact protection box.
7) Caution for use in an interlock circuit

When an auto switch is used for an interlock signal requiring high reliability, devise a double interlock system by providing a mechanical protection function, or by using another switch (sensor) together with
8) Pe auto swich
sure periodical maintenance and confirm proper operation. Ensure sufficient clearance for maintenance activities. When designing an application, be
4.3 Mounting and Adjustment

1) Do not drop or bump the product

Do not drop, bump or apply excessive impact ( $300 \mathrm{~m} / \mathrm{s}^{2}$ or more) while handling. Although the body of the switch may not appear damaged, the inside of the switch may be damaged and cause a malfunction.
2) Do not carry an actuator by the auto switch lead wires

This may not only cause broken lead wires, but it may cause internal
3) Mount switches using the correct tightening torque.

If a switch is tightened beyond the tightening torque range, the mounting screw, mounting bracket or switch may be damaged. On the other hand, tightening below the tightening torque range may

## 4 instaliation (continued)

4) Mount a switch at the centre of the operating range. Adjust the auto switch mounting position so that the piston stops at the centre of the operating range (the range in which the switch is ON). The auto switch Red LED will turn ON.
For the 2 colour type auto switch (D-A79W) the Green LED turn ON to indicate the optimum position.
The mounting position shown in the catalogue indicates the optimum position at the end of stroke. If mounted at the end of the operating range (around the borderine of ON and OFF) operation may be unstable.
5) The auto switch ON and OFF position operates with a hysteresis. If the hysteresis causes a problem, please consult with SMC

### 4.4 Mounting using a mounting bracket

Each actuator has a specified mounting bracket type.
Mounting depends on the actuator type and tube I.D. Please refer to the actuator catalogue.
is thauto switch is mounted for the first time, ensure that the actuator corresponding to the actuator

- Mounting procedure

1) Slide the auto switch mounting nut inserted into the mounting rail and set it at the auto switch mounting position.

2) Fit the convex part of the auto switch mounting arm into the concave part of the mounting rail. Then slide the switch over the nut (CDQ2 series: Fit the convex part of the auto switch mounting arm through the auto swich spacer into the concave part of the auto switch mounting rail).
Push the auto switch mounting screw lightly into the mounting nut Arough the hole in the auto switch mounting arm.
Acure the aut detection position, tighten the mounting screw to

3) Modification of number (3).

## D\#ZZ-TF222-159EN

4.5 Wirin

1) Avoid repeatedly bending or stressing lead wires.

Broken lead wires can result from wiring layouts which repeatedly apply bending stress or stretching force to the lead wires.
2) Be sure to connect the load before power is applied.

If the power is turned ON when an auto switch is not connected to a Contire switch insue instantly damaged due to excess current.
circuits, ground fault, improper insulation between terminals, Damage may occur due to excess current flow into terminals, etc.)
) Do not route wiring with power lines or high voltage lines
Avoid parallel wiring or wiring in the same conduit with these lines.

5) Do not allow short circuit of loads.

If power is turned ON with a load in a short circuit condition, the switch will be instantly damaged due to excess current flow.
6) Avoid incorrect wiring
indicator light has poarity wire is $(+)$, and the blue [black] lead wire is $(-)$. will not light are reversed, the switch will operate, however, the LED will not light up. Also note that a current greater than that specified will

4.5.2 Auto switch with Pre-wired connector

Some auto switches are available with pre-wired M8 or M12 connector. Refer to the "How to Order" information in the catalogue or operation
manual on the SMC website (URL: https// www.smcworld.com ).
4.5.3 Connector pin assignment

| D-A**SAPC | D-A**SBPC | D-A**SDPC |
| :---: | :---: | :---: |
| M8 3-pin | M8 4-pin | M12 4-pin |
|  |  | $\left(\begin{array}{ll} (2) & (1) \\ (3) & 4 \end{array}\right)$ |

- Reed auto switches with pre-wired connectors are made to special order. Please note that it may take additional time to deliver.

## 4 Instailation (continued)

### 4.6 Environmen

## A Warning

- Do not use in an environment where oil, corrosive gases, chemicals, salt water or steam are present.
salt water or steam are prese
- Do not install in a location sub
the product specifications.
the product specifications.
- Do not mount in a location exposed to radiant heat that would result in
temperatures in excess of the product specification.
- Do not use in an area where a magnetic field is generated.
Auto switches can malfunction or magnets inside actuators can Auto switches can mane
- Do not use in an environment where the auto switch will be continually exposed to water.
- Do not use in an environment with temperature cycles.
- Avoid accumulation of iron waste or close contact with magnetic substances. A large amount of accumulated iron waste such as
machining chips or spatter may cause the auto switch to malfunction

## 5 How to Order

Refer to the catalogue or operation manual on the SMC website (URL: https// www.smcworld.com ) for How to order information.

## 6 Outline dimensions

Refer to the catalogue or operation manual on the SMC website (URL: https// www.smoworld.com ) for outline dimensions.

## 7 Maintenance

### 7.1 General Maintenance

- Not following proper maintenance procedures could cause the product to malfunction and lead to equipment damage.
- If handled improperly, compressed air can be dangerous
- Maintenance of pneumatic systems should be performed only by qualified personnel.
- Before performing maintenance, turn off the power supply and be sure to cut off the supply pressure. Confirm that the air is released to - atmosphere.
- After installation and maintenance, apply operating pressure and power to the equipment and perform appropriate functional and
If any electrical connections are disturbed during maintenance,
they are reconnected correctly and safety checks are carried out as required to ensure continued compliance with applicable national regulations.
- Do not make any modification to the product
- Do not disassemble the product, unless required by installation or maintenance instructions.
- Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.

1) Securely tighten switch mounting screws. If screws become loose or the mounting position is dislocated, re-tighten them after readjusting
the mounting position. the mounting position.
2) Confirm that there is no damage to lead wires. To prevent fautly insulation, replace switches or repair lead wires, etc., if damage is discovered.

8 Troubleshooting
When detection failure occurs check the switch according to the chart

(A) $=$ Auto switch failure
(B) = Replace the actuator. Detectable magnetic field inadequate (or no magnet).
(B) $=$ Replace the actuator. Detectable magnetic field inadequate (or no magnet).
(C) $=$ Correct the wiring, replace the load or replace the auto switch atter correcting the wiring.
(D) $=$ After checking the operating environment, replace the auto switch.
(E) = Replace the auto switch after correcting the wiring.

## 9 Limitations of Use

8.1 Limited warranty and Disclaimer/Compliance Requirements Refer to Handling Precautions for SMC Products.

## 10 Product disposal

This product should not be disposed of as municipal waste. Check your
local reguations and guidelines to dispose of this product correctly, in
order to reduce the impact on human health and the environment

## 11 Contacts
