The intended use of the programless controller is to control the movement of an electrical actuator in response to step data inputs.

### Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning,” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) 1, and other safety regulations.

- **IEC 60204-1**: Safety of machinery - Electrical equipment of machines. (Part 1: General requirements)
- **ISO 10218-1**: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.
- **Refer to product catalogue, Operation Manual and Handling Precautions for SMC Products for additional information.**
- **Keep this manual in a safe place for future reference.**

### 2 Specifications (continued)

Special products (X) might have specifications different from those shown in this section. Contact SMC for specific drawings.

#### 3 Name and function of individual parts

- **PWR LED (Green)**: LED is ON: Power ON / Servo ON LED Flashing: Power ON / Servo OFF
- **ALM LED (Red)**: LED is ON: Power ON / with Alarm LED Flashing: Parameter setting
- **Cover**: Mode switch protection cover.
- **FG**: Functional Ground (When mounting the controller, tighten screws and attach the grounding cables.)
- **Mode switch**: Switch to select auto / manual.
- **7 segment LED display**: Auto mode / Without alarm: Indicates the position number which is instructed by ON/OFF of I0 to I3 of the CN4 parallel I/O. (During command operation: Flashing / instruction command completed: ON) Auto mode / With alarm: Indicates Alarm Group. Manual mode: Indicates that content may vary depending on the operating function.
- **SET button**: Determines the settings and gives a command to operate in manual mode.
- **Position switch**: Assigns the position number.
- **MANUAL Forward button**: Performs forward Jog and inching.
- **MANUAL Reverse button**: Performs reverse Jog and inching.
- **SPEED Forward button**: 16 forward speeds are available.
- **SPEED Reverse button**: 16 reverse speeds are available.
- **ACCEL Forward button**: 16 forward acceleration steps are available.
- **ACCEL Reverse button**: 16 reverse acceleration steps are available.
- **CNT power connector (4 pins)**: Connection for power supply.
- **CN2 Motor drive controller (6 pins)**: Connect motor controller of actuator.
- **CNT Encode connector (16 pins)**: Connect encoder connector of actuator.
- **CN4 I/O connector (14 pins)**: Connection for I/O cable.

#### 4 Installation (continued)

- **Do not install the product unless the safety instructions have been read and understood.**
- **Design the installation so that the temperature surrounding the controller is within the specified operating temperature. Leave enough space between the controllers so that the operating temperature of the controllers remains within the specification range.**
- **Mount the controller vertically with 30 mm minimum space at the top and 60 mm minimum at the bottom of the controller as shown below.**
  
  ![](image)

  - **30 mm minimum**
  - **60 mm minimum**

- **Allow 60 mm minimum space between the front of the controller and a door (lid) so that the connectors can be connected and disconnected.**

#### 5 Wiring

- **Do not use an inrush current limited type of power supply for the controller.**
- **Do not connect multiple wires to one connector terminal.**

### 2 Specifications

#### 2.1 General specifications

<table>
<thead>

---

**Caution**

- Always ensure compliance with relevant safety laws and standards.
- All work must be carried out in a safe manner by a qualified person in compliance with applicable national regulations.

---

**Warning**

- Do not expose to direct sunlight. Use a suitable protective cover.
- Do not install in a location subject to vibration or impact in excess of the product’s specifications.
- Avoid mounting the controller near a vibration source, such as a large electromagnetic contactor or circuit breaker on the same panel.
- Do not use an inrush current limited type of power supply for the controller.

---

**Notice**

- When using DIN rail mounting, hook the controller on the DIN rail and press the lever in the direction of the arrow to lock it.

---

**Waarning**

- Do not perform wiring while the power is on.
- Confirm proper insulation of wiring.
- Do not route wires and cables together with power or high voltage cables.
- Keep wiring as short as possible to prevent interference from electromagnetic noise and surge voltage.
- Do not use an inrush current limited type of power supply for the controller.
- Do not connect multiple wires to one connector terminal.

---

**Caution**

- Do not use in an environment where corrosive gases, chemicals, salt water or steam are present.
- Do not use in an explosive atmosphere.
- Do not expose to direct sunlight. Use a suitable protective cover.
- Do not install in a location subject to vibration or impact in excess of the product’s specifications.
- Do not mount in a location exposed to radiant heat that would result in temperatures in excess of the product’s specifications.

---

**Cauton**

- Do not use in an environment with strong magnetic fields present.

---

**Note**

- If the mounting surface for the controller is not flat or is uneven, excessive stress may be applied to the enclosure, which can cause failure. Be sure to mount on a flat surface.

---

**Notice**

- **Refer to actuator specifications**
- **Refer to I/O cable specifications**
- **Refer to controller specifications**
- **Refer to pin assignment**
- **Confirm proper insulation of wiring.**
- **Do not use a current limited type of power supply for the controller.**
- **Do not connect multiple wires to one connector terminal.**
- **Always ensure compliance with relevant safety laws and standards.**
- **All work must be carried out in a safe manner by a qualified person in compliance with applicable national regulations.**

---

**Caution**

- Do not perform wiring while the power is on.
- Confirm proper insulation of wiring.
- Do not route wires and cables together with power or high voltage cables.
- Keep wiring as short as possible to prevent interference from electromagnetic noise and surge voltage.
- Do not use an inrush current limited type of power supply for the controller.
- Do not connect multiple wires to one connector terminal.

---

**Notice**

- If the mounting surface for the controller is not flat or is uneven, excessive stress may be applied to the enclosure, which can cause failure. Be sure to mount on a flat surface.

---

**Warning**

- Do not use in an environment with strong magnetic fields present.
- Do not use in an environment where corrosive gases, chemicals, salt water or steam are present.
- Do not use in an explosive atmosphere.
- Do not expose to direct sunlight. Use a suitable protective cover.
- Do not install in a location subject to vibration or impact in excess of the product’s specifications.
- Do not mount in a location exposed to radiant heat that would result in temperatures in excess of the product’s specifications.
- Avoid mounting the controller near a vibration source, such as a large electromagnetic contactor or circuit breaker on the same panel.
- Do not use in an environment with strong magnetic fields present.

---

**Caution**

- Do not perform wiring while the power is on.
- Confirm proper insulation of wiring.
- Do not route wires and cables together with power or high voltage cables.
- Keep wiring as short as possible to prevent interference from electromagnetic noise and surge voltage.
- Do not use an inrush current limited type of power supply for the controller.
- Do not connect multiple wires to one connector terminal.

---

**Notice**

- If the mounting surface for the controller is not flat or is uneven, excessive stress may be applied to the enclosure, which can cause failure. Be sure to mount on a flat surface.

---

**Warning**

- Do not use in an environment with strong magnetic fields present.
- Do not use in an environment where corrosive gases, chemicals, salt water or steam are present.
- Do not use in an explosive atmosphere.
- Do not expose to direct sunlight. Use a suitable protective cover.
- Do not install in a location subject to vibration or impact in excess of the product’s specifications.
- Do not mount in a location exposed to radiant heat that would result in temperatures in excess of the product’s specifications.
- Avoid mounting the controller near a vibration source, such as a large electromagnetic contactor or circuit breaker on the same panel.
- Do not use in an environment with strong magnetic fields present.
5 Wiring (continued)

5.3 Ground connection
- Place a ground cable with crimped terminal under one of the M4 mounting screws with a shakeproof washer and tighten the screw.

! Caution

The M4 screw, cable with crimped terminal and shakeproof washer must be prepared by the user.
- A dedicated Ground connection must be used. Grounding should be to a D-class ground (ground resistance of 100 Ohm maximum).
- The cross-sectional area of the ground cable shall be 2 mm² minimum.
- The Grounding point should be as near as possible to the controller. Keep the grounding cable as short as possible.

5.4 Parallel I/O Connector
- When connecting the parallel I/O connector to a PLC use an SMC parallel I/O cable (LEC-CCA-#).
- There are 2 types of parallel I/O with this controller: NPN type and PNP type. Check the polarity required before use. The parallel I/O wiring should be prepared according to the polarity.

6 Setting

6.1 Stop position and operation mode
- It is necessary to set the stop position and operation method of the controller in order to move the electric actuator to a specified position. Set data is stored in the memory in the controller.

6.2 Auto / Manual mode setting
- There are 2 types of modes on the controller (manual and auto mode).
- Setting and operating methods are different. The mode is selected using the mode switch on the front of the controller.

Refer to the Operation Manual on the SMC website (URL: https://www.smcworld.com) for further setting details.

7 LED Display

Refer to the table below for details of the LED status.

<table>
<thead>
<tr>
<th>LED</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>PWR Green LED is ON</td>
<td>Servo is turned ON</td>
</tr>
<tr>
<td>Green LED is flashing</td>
<td>Servo is turned OFF</td>
</tr>
<tr>
<td>ALM OFF Normal operation</td>
<td></td>
</tr>
<tr>
<td>Red LED is ON</td>
<td>Alarm is generated</td>
</tr>
</tbody>
</table>

8 How to Order

Refer to the catalogue on the SMC website (URL: https://www.smcworld.com) for the How to Order information.

9 Outline Dimensions (mm)

Refer to the drawings / operation manual on the SMC website (URL: https://www.smcworld.com) for outline dimensions.

For further details of the Parallel I/O wiring refer to the Operation Manual on the SMC website (URL: https://www.smcworld.com).

10 Maintenance

10.1 General Maintenance
- Do not make any modification to the product.
- Do not disassemble the product, unless required by installation or maintenance instructions.

! Caution

- Maintenance should be performed according to the procedure indicated in the Operation Manual.
- When equipment is serviced, first confirm that measures are in place to prevent dropping of work pieces and run-away of equipment, etc.
- Then cut the power supply to the system. When machinery is restarted, make sure that operation is normal with actuators in the correct position.

! Warning

- Perform maintenance checks periodically.
- Confirm wiring and screws are not loose. Loose screws or wires may cause unexpected malfunction.
- Conduct an appropriate functional inspection and test after completing maintenance. In case of any abnormalities (if the actuator does not move, etc.), stop the operation of the system. Otherwise, an unexpected malfunction may occur and it will become impossible to ensure safety. Operate an emergency stop instruction to confirm safety.
- Do not put anything conductive or flammable inside of the controller.
- Ensure sufficient space around the controller for maintenance.

11 Limitations of Use

11.1 Limited warranty and Disclaimer/Compliance Requirements

Refer to Handling Precautions for SMC Products.

12 Product disposal

This product shall not be disposed of as municipal waste. Check your local regulations and guidelines to dispose of this product correctly, in order to reduce the impact on human health and the environment.

13 Contacts

Refer to www.smcworld.com or www.smc.eu for your local distributor / importer.
