SMC. ORIGINAL INSTRUCTIONS
Installation \& Maintenance Manual
Auto Switch (Reed switch type)
Series D-A73/ D-A80 D-A73H/D-A76H/ D-A80H
(Basic Safety Principles according to EN ISO 13849)

The intended use of the Auto switch is to detect a position of a magnet解 table, etc
this IMM is only applicable for validated products to ISO 13849. Refe
The to Doc. No. D*ZZ-SM0072P.
This manual should be read in conjunction with the current produc catalogue. Keep this manual in a safe place for future reference.

## Model Indication Method

## D-A $\square \square \square$

## 7376 With indicator lamp $80 \cdots$ Without indicator lamp

Electrical entry-

This product is a reed switch type Auto switch of direct mounting specification

## Safety Instructions

This product is class A equipment that is intended for use in an industrial environment.
This manual contains essential information for the protection of users and others from possible injury and property damage.
To ensure correct handling please follow the instructions.
To ensure correct handling, please follow the instructions. Please check that you fully understand the meaning of the following
messages (signs) before going on to read the text, and always follow the instructions.
Please read the Installation \& Maintenance Manual of related apparatus and understand it before operating the unit

## IMPORTANT MESSAGES

Read this manual and follow its instructions. important safety information which must be carefully followed.
. $\quad$ Indicates a hazard with a high

ADANGEE

## AWARNING

ACAUTION
injury. and/or equipment damage. "These instructions indicate the level of potential hazard by label of "Caution", "Warning" or "Danger".
To ensure safety be sure to observe ISO4414 (Noiell), JIS B 8370 (Noae2) and other safety practices.
(Note 1):ISO 4414:Pneumatic fluid power - Recommendations for the application of equipment to transmission and control systems.
(Note 2):JIS B 8370:Pneumatic system axiom.

## Safety Instructions (continued) <br> \section*{AWARNING}

1. The compatibility of pneumatic equipment is the responsibility of the person
specifications
Since the products specified here are used in various operating conditions,
their compatibility for the specific pneumatic system must their compatibility for the specific pneumatic system must be based on
specifications or after analysis and/or tests to meet your specific specifications
requirements.
2. Only trained personnel should operate pneumatically operated machinery and equipment.
Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by 3. Do not service machinery
component until safety is confirmed 1) Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe locked-out control positions
2) When equipment is to be removed, confirm the safety process as mentioned above. Switch off air and electrical supplies and exhaust al 3) Before machinery/equipment is re-started, ensure all safety measures to prevent sudden movement of actuators etc. (Supply air into the system gradually to create backpressure, i.e. incorporate a soft-start valve).
4. Contact SMC if the product is to be used in any of the following conditions
ironments beyond the given specifications, or if product 2) Installations in conjunction with atomic energy, railway, air navigation, )

## Design and selection

1) Confirm the specifications

Read the specifications carefully and use the product accordingly. The product may be damaged or malfunction if it is used outside the range of specifications for load current, voltage, temperature or impact.
2) Take precautions when multiple actuators are used clo
2) Take precautions when multiple actuators are used close together please ensure that, when two or more actuators are used in parallel, itey ar pease ensure that, when
kept at least 40 mm apart
(When the allowable interval is specified for each actuator series, use the indicated value.
3) Keep wiring as short as possible
As the length of the wiring to switching ON becomes greater, and this may shorten the product's life (the switch will stay ON all the time).
4) Pay attention to the internal voltage drop of the switch

1) Switches with an indicator LED

- If auto switches are connected in series as shown below, take note that there will be a large voltage drop because of the internal resistance of the
LED. (refer to internal voltage drop in the [The voltage drop will be "n" times the auto switch specifications). connected].
Even though an auto switch operates normally, the load may not operate.

\section*{| Load |
| ---: | :---: | :---: | :---: |}

$\cdot$ In the same way, when operating below a specified voltage, although an auto switch may operate normally, the load may not operate.
Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

## Supply - Internal voltage $>$ Minimum operating

switch without an indicator LED (model D-A80/A80H).
5) Do not use a load that generates a surge voltage

Please avoid use under the following load conditions, because it could lead to a deterioration of the service life (contacts remain in the on-position).
-use with an inductive load such as a relay
6) Cautions for use in a safety related circuit

Perform periodic maintenance and confirm proper operation in accordance
with safety related requirements.

## Design and selection (continued)

7) Ensure sufficient clearance for maintenance.
when designing an application, be sure to allow sufficient clearance for

## Mounting / Adjustment

## 1) Do not drop or bump the auto switch

Do not drop, bump or apply excessive impacts ( $300 \mathrm{~m} / \mathrm{s}^{2}$ or more). Although the body of the auto switch may not be damaged, the inside of the switch could be damaged and cause a malfunction.
2) Do not carry a cylinder (actuator) by the auto switch lead wires. wires, but it may cause internal elements of the auto switch to be damaged by the stress.
3) Mount switches using the correct tightening torque

If an auto switch is tightened beyond the specified tightening torque, the
mounting screws, mounting brackets or switc may be damage ounting screws, mounting brackets or switch may be damaged. loosen the screw and the auto switch may slip out of the correct detection position.
4) Mount a switch at the center of the operating range.

Adjust the mounting position of an auto switch so that the piston stops at the center of the operating range.
OFF), operation may be unstable.

## Wiring

1) Avoid repeatedly bending or stretching the lead wires.

Broken lead wires can result from wiring applications which repeatedly applies bending stress or tensile force to the lead wires.
) Be sure to connect the load before power is applied.
auto switch is switched ON, the switch will be instantly damaged because of excess current.
excess current.
3) Confirm proper insulation of wiring
Be sure that there is no faulty wiring insulation (contact with other circuits, occur due to excess current flow into the switch.
4) Do not wire with power or high voltage cables.

Wire separately from power or high voltage cables, avoiding parallel wiring in the same conduit. Control circuits containing auto switches may malfunction due to noise from these cables.
If the power is turned ON with a load in a short circuited condition, the switch will be instantly damaged because of excess current flow into the switch. 6) Avoid incorrect wiring.

A 24 VDC switch with indicator LED has polarity. The brown lead wire is ( + ), and the blue lead wire is $(-)$
If connections are reversed, the switch will operate, however the LED will not Aso note that a current greater than that specified will damage the LED and it will no longer operate.

## Operating Environment

1) Never use in an atmosphere of explosive gases.
he structure explosion.
2) Do not use in an area where a magnetic field is generated. Auto switches can malfunction or magnets inside cylinders (actuator) can become demagnetized.
Do not use in an environment where the auto switch will be hough switched to water
Alnough switches satisfy IEC standard IP67 construction (JIS C 0920.
watertight construction), avoid using switches in applications continually exposed to water splash or spray. Poor insulation or swelling of the potting resin inside switches may cause malfunction.
Do not use in an environment with oil or chemicals.
Consult SMC if auto switches will be used in an environment with coolant, cleaning solvent, various oils or chemicals. If auto switches are used under these conditions for even a short time, they may be adversely affected by improper insulation, malfunction due to swelling of the potting resin, or hardening of the lead wires.
Consult SMC if switches are to to with temperature cycles. other than normal air temperature changes, as there may be adverse effects inside the switches.

## Operating Environment (continued)

6) Do not use in an environment where there is excessive impact shock.
shock.
When excessive impact ( $300 \mathrm{~m} / \mathrm{s}^{2}$ or more) is applied to a reed switch during operation, the contact point will malfunction or cut off a signal momentarily (1
ms or less). Consult SMC regarding the need to use a solid state auto switch depending upon the environment. 7) Avoid accumulation of iron waste or close contact with magnetic substances.
When a large amount of iron waste such as machining chips or spatter is accumulated, or a magnetic substance (something attracted by a magnet) is auto switch to malfunction due to a loss of the magnetic force inside the actuator.

## Maintenance

1) Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.
2) Securely tighten switch mounting screws.

If screws become loose or the mounting position is dislocated, retighten hem ater readjusting the mounting position.
To prevent faulty insulation, replace switches or repair lead wires, etc., if damage is discovered.
Others

1) For durability against water, flexible durability of the wire
(hysteresis) cause problems, please

## D-A73H / D-A76H / D-A80H

## Installation

How to mount / Mounting bracket
Each actuator has a specified mounting bracket for mounting the auto switch.
"How to mount / Mounting bracket" depends on the actuato type and the tube I.D. Please refer to the actuator catalogue. When an auto switch is mounted for the first time, ensure tha the actuator is a type including a built in magnet, and select a bracket corresponding to the actuator

$$
\frac{\text { Auto switch mounting screw }}{(M 3 \times 0.5 \times 8 \text { en }}
$$

$$
\frac{\text { Auto swich mounting screw }}{(M 3 \times 0.5 \times 10 \mathrm{C}} \frac{\mathrm{O}}{\mathrm{I}}
$$

## Installation (continued)

1) Slide the auto switch mounting nut into the mounting rail and set it
at the auto switch mounting position.
2) Fit the convex part of the auto switch mounting arm into the concave part of the mounting rail. Then slide the switch over the nut. \{series CDQ2(old model): Fit the convex part of the auto switch of auto switch mounting rail\}.
3) Push the auto switch mounting screw lightly into the mounting nut through the hole in the auto switch mounting arm
4)After reconfirming the detecting position, tighten the mounting screw to secure the auto switch
trque of M3 screw should be 0.5 to $0.7 \mathrm{~N} \cdot \mathrm{~m}$.)
5)Modification of the detecting position should be made in the condition of 3

## Troubleshooting

When detection failure occurs (stay ON / OFF), please check based on the following flow chart.

## Limitations of Use

Any use in an EN ISO 13849 system must be within the specified limits and application conditions. The user is responsible for the specification, design, implementation validation and maintenance of the safety system (SRP/CS).
