## Installation and Maintenance Manual

Auto Switch (Reed switch type)
Series D-A90-588 / D-A93-588

## D-A90V-588 / D-A93V-588

 II 3D Ex tc IIIC T93${ }^{\circ} \mathrm{C}$ Dc X IP67

ATEX Marking Description<br>3G Ex nA IIC T5 Gc X $-10^{\circ} \mathrm{C} \leq \mathrm{Ta} \leq+60^{\circ} \mathrm{C}$ 3D Ex tc IIIC T93${ }^{\circ} \mathrm{C}$ D X IP67

## Equipment Group II

G - Category 3 for Gas
Ex - European standards apply
A - Non-sparking apparatus
C - For all types of gas
5 - Temperature classification
c - Equipment Protection Level
Ta - Ambient temperature

3D - Category 3 for Dust c - Protected by enclosure IIC - For all types of dust $93^{\circ} \mathrm{C}$ - max. surface temperature - - Equipmentroction Leve use, see instructions P67-Enclosure protection rating

## 1 Safety Instructions

1.1 General recommendation

This manual contains essential information for the protection of users and
others from possible injury and/or equipment damage.
and read the manuals of related apparatus before use

- Keep this manual in a safe place for future reference.
- These instructions indicate the level of potential hazard by label of Caution", "Warning" or "Danger", follo
To ensure safety of personnel and equipment the safety instructions in this manual and the product catalogue must be observed, along with other relevant safety practices.

| A Caution | Indicates a hazard with a low level of risk, which if not <br> avoided, could result in minor or moderate injury. |
| :---: | :--- |
| A Warning | Indicates a hazard with a medium level of risk, which <br> if not avoided, could result in death or serious injury. |
| A Danger | Indicates a hazard with a high level of risk, which if <br> not avoided, will result in death or serious injury. |

## A Warning

The compatibility of pneumatic equipment is the responsibility of the
person who designs the pneumatic system or decides its person who
specifications.
ince the products specified here can be used in various operating conditions, their compatibility with the specific pneumatic system must e based on specifications or after analysis and/or tests to mee pecific requirements.
. Only trained personnel should operate pneumatically operated machinery and equipment. Assembly, handling or repair of permatic is untamiliar with it performed by trained and experienced personnel.
3. Do not service machinery/equipment or attempt to remov omponents until safety is confirmed.
Inspection and maintenance of machinery/equipment should only be
performed after confirmation of safe locked-out tontro lositions performed after confirmation of safe locked-out control positions. mentioned above. Switch off air and electrical supplies and exhaus all residual compressed air in the system.

Before machinery/equipment is re-started, ensure all safety measure prevent sudden movement of cylinders etc. (Supply air into the system gradually to create back pressure, i.e. incorporate a soft-sta
valve).
4. Contact SMC if the product is to be used in any of the following Conditions and environments beyond the given specifications, or the product is to be used outdoors.
Installations in conjunction with atomic energy, railway, air navigation vehicles, medical equipment, food and beverage, recreation equipment.
An application which has the possibility of having negative effects on people, property, or animals, requiring special safety analysis.
1.2 Conformity to standards

This product is certified to and complies with the following standards:
ATEX Directive 2014/34/EU
EN 60079-0:2012+A11
EN 60079-15:2010
EN 60079-31:2014
EMC Directive 2014/30/EU
EN6100-6-2:2005
EN 55011:2009+A1:2010
General requirements
Protection by enclosure " t "
Immunity for industrial environments
Industrial, scientific \& medical equipmen

## 2 Installation And Operating Environment

Design and selection

## . Confirm the specifications

Read the specifications carefully and use this product appropriately. The product may be damaged or malfunction if it is used outside th 2. Take precautions when multiple actuators are used close together.

When multiple auto switch actuators are used in close proximity
When multiple auto switch actuators are used in close proximity, Maintain a minimum actuator separation of 40 mm .
3. Pay attention to the length of time that a switch is ON at an intermediate stroke position. and a load is driven at the time the piston passes, the auto switch w operate, but if the speed is too great the operating time will b shortened and the load may not operate correctly. The maximum detectable piston speed is
$\mathrm{V}[\mathrm{mm} / \mathrm{s}]=\frac{\text { Autoswitch operating range }[\mathrm{mm}]}{1000}$
. Keep wiring as short as possible
Aswe length of the wiring to a load increases, the inrush current a (The switch will stay ON all the time).
Use a contact protection box when the wire length is 5 m or longe
5. Pay attention to the internal voltage drop of the switch

If auto switches are connected in series as shown below, take note that there will be a large voltage drop due to internal resistance in the ligh emitting diodes. (Refer to internal volage drop in the auto switch [The voltage drop will be " $n$ " times greater when " $n$ " auto switches are connected].
Even though an auto switch operates normally, the load may no

1 O-
In the same way, when operating below a specified voltage, although an auto switch may operate normally, the load may not operate
Therefore, the formula below should be satisfied after confirming the Therefore, the formula below should be
minimum operating voltage of the load.

Supply - Internal voltage Minimurn opera

switch with a contact protection box.

Cautions for use in an interlock circuit.
When an auto switch is used for an interlock signal requiring high When an auto switch is used for an interlock signal requiring high
reliability, devise a double interlock system to avoid trouble by
providing a mechanical protection function or by also using another providing a mechanical protection function, or by also
switch (sensor) together with the auto switch.

## Perform periodic maintenance and confirm proper operation. Ensure sufficient clearance for maintenance activities. When

Ensure sufficient clearance for maintenance activities. When designing
an application, be sure to allow sufficient clearance for maintenance and inspections.
and

Mounting / adjustment
Do not drop or apply excessive impacts
Do not drop, or apply excessive impacts ( $300 \mathrm{~m} / \mathrm{s}^{2}$ or more for reed switches) while handling. Although the body of the switch may not be
damaged, the inside of the switch could be damaged and cause malfunction.
2. Do not carry an actuator by the auto switch lead wires. Never carry a actuator by the lead wires. This may not only cause broken lead wires, but it may cause internal element
be damaged by the stress.
Mount switches using the proper tightening torque.
Mount switches using the proper tightening torque.
If a switch is tightened beyond the range of tightening torque, the If a switch is tightenen beyond the range of tightening torque, the
mounting screws, mounting brackets or switch may be damaged. On the other hand, tightening below the range of tightening torque may allow the switch to slip out of position.
4. Mount a switch at the centre of the operating range.
Adjust the mounting position of the auto switch so that the piston stops at the centre of the operating range aut the range in which a switch is ON (The mounting position shown in the catalogue indicates the optimum position at the stroke end).
ON and OFF), operation may be unstable.

## Wiring

Avoid repeatedly bending or stretching lead wires.
Broken lead wires can result from wiring layouts which repeatedly apply bending stress or tensile force to the lead wires.
Be sure to connect the load before power is applied.
If the power is turned ON when an auto switch is not connected to a load, the switch will be instantly damaged due to excess current.
Confirm proper insulation of wiring
3. Confirm proper insulation of wiring

Be certain that there is no faulty wiring insulation (contact with other circuits, ground fault, improper insulation between terminals, etc.
Damage may occur due to excess current flowing into the switch.
4. Do not route the wires with power lines or high voltage lines.

Route wires separately from power lines or high voltage lines, avoiding parallel wiring or wiring in the same conduit
Control circuits containing auto switches may malfunction due to noise
dom these other lines.
If the power is turned ON with a load in a short circuit condition, the switch will be instantly damaged because of excess current flow into the switch.
Avoid incorrect wiring.
A 24 VDC switch with indicator light has polarity. The brown [red] lead wire is $(+)$, and the blue [black] lead wire is ( $(-)$

1) If connections are reversed a switch will op
) If connections are reversed, a switch will operate, however, the ligh emitting diode will not light up.
Note that exceeding the speciifed current greater will damage the ligh Note that exceeding the specified current greater will damage
emitting diode. It will no longer operate (model: $\mathrm{D}-\mathrm{A} 93(\mathrm{~V})$-588).

## Operating environment

Do not use in an area where a magnetic field is generated.
Auto switches can malfunction or magnets inside actuators can become demagnetized.
ironment where the auto switch will be continually
Although switches satisfy IEC standard IP67 construction (JIS C 0920 watertight construction), avoid using switches in applications continually exposed to water splash or spray. Poor insulation or
swelling of the potting resin inside the switch may cause malfunction.

2 Installation and Operating Environment (continued)
3. Do not use in an environment with oil or chemicals.

Consult SMC if auto switches will be used in an environment with coolant, cleaning solvent, various oils or chemicals. If auto switches
are used under these conditions for even a short time, they may be adversely affected by improper insulation, malfunction due to swelling of the potting resin, or hardening of the lead wires.
Do not use in an environment with temperature cycles.
4. Do not use in an environment with temperature cycles.
Consult SMC if switches are to be used where there are temperature Consult SMC it switches are to be used where there are temperature
cycles other than normal air temperature changes, as there may be adverse effects to the inside of the switch.
5. Do not use in an environment where there is excessive impact shock. When excessive impact ( $300 \mathrm{~m} / \mathrm{s}^{2}$ or more) is applied to a reed switch
during operation, the contact point will malfunction and generate or cut during operation, the contact point will malfunction and generate or cut
off a signal momentarily $(1 \mathrm{~ms}$ or less). Consult SMC regarding the
need to use a solid state switch depending upon the environent

## A Warning

6. Avoid accumulation of iron waste or close contact with magnetic substances. When a large amount of iron waste such as machining chips or spatter is accumulated, or a magnetic substance (something attracted by a magnet) is brought into close proximity with an actuator with auto
witch, it may cause the auto switch to malfunction due to $a$ loss of magnetic force inside the actuator.

## Maintenance

Perform the following maintenance periodically in order
possible danger due to unexpected auto switch malfunction.
) Securely tighten the switch mounting screws.
screws become loose or the mounting position is dislocated retighten them after readjusting the mounting pos
2) Contirm that there is no damage to lead wires.
To prevent faulty insulation, replace switches or repair lead wires, etc.,
if damage is discovered.

Others For durability against water, elasticity, application at welding site, 2. If the ON / OFF position (hysteresis) causes problems, consult SMC.

This product
specification.
pecrication. The switch should only be used in areas in which potentially explosive time.

## D×zz-tfm11-

## 4 Intended Conditions Of Use

The auto switch should be used within the range of specifications below and in the auto switch catalogue.
If labelled with X : special conditions applied:
Protect the auto switch against all impact or mechanical damage
Protect the auto switch from sources of heat which can genera
surface temperatures higher than the temperature classification.
3. The switch should not be exposed to prolonged sunlight or UV light
that can generate surface temperatures higher than the temperature that can generate surface temperatures high
classification. Use a suitable protective cover.
