## 1 SAFETY

1.1 General recommendation

These safety instructions are intended to preventa a hazardous situation and/or equipment damage. These instructions
indicate the elevel lof optetutial hazard by label of "Caution equipment the es of poty intial hazard by habel of "Caution", "Warning" or "Dangert". To ensure safety of of persontel and
§. cAution: operator error could result in injury or equipment damage.
【 WARNING: Operator error could result in serious injury or loss of life
D. DANGER: In extreme conditions, there is a possible result of serious injury or loss of life.

## $\triangle$ warning

1. The compatibility of pneumatic equipment is the responsibility of the person who designs the pneumatic system or

Since the products specified here are used in various operating conditions, their compatibility for the specific
pneumatic system must be based on specifications or after analysis and/or tests to meet your specific requirements.
2. Only trained personnel should operate pneumatically operated machinery and equipment.
Compesssed air can be dangerous if an operator is unfaniliar with it
systems should systems should be performed by trained and experienced operators.
3. D. not service machinery/equipment or attempt to remove component until safety is confirmed.
Inspertion and maintenance of machinery/equipment should only be pertormed after confirmation of safe locked-
out contro positions. out control positions.
When equipment is to be removed, confirm the safety process as mentioned above. Switch off air and electrical
supplies and exhaust all residual compressed air in the system.

4. Contact SMC if the product is to be used in any of the following conditions:
Conditions and environments beyond the given specifications, or if product is used outdoors. - Installations in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and
 Applications which have the possitu
Special safety analysis is required.

## 2 INSTALLATION AND OPERATING ENVIRONMENT

## \t warning

Design and selection

1. Confirm the specifications.
Read the specificitions carefuly and use this product appropriately. The product may be damaged or malfunction
Rfit is sued outside the range of specifications for load current, voltage, temperature or impact.

If it is used outside the range of specifications for load current, voltage, temperature or impact.
2. Take precautions when multipl actuators are used close together.
When multiple auto switch acctuators are used in close proximity, magnetic field interference may cause the
When multitie auto switch actuators are used in close proximity, magnetic
3. Pay attention to the length of time that a switch is oN at an intermediate stroke position.
When an auto switch is placed at an intermediate position of the stroke and a load is drive
piston passes, the auto switch will operate, but if the speed is too great the operad is driven at the time the
the load may not operate properly. The maximum detectable piston speed is:

$$
\mathrm{V}[\mathrm{~mm} / \mathrm{s}]=\frac{\text { Autoswitch operating range }[\mathrm{mm}]}{\text { Load operating time }[\mathrm{ms}]} \times 1000
$$

4. Keep wiring as short as possible.
Although longer wiring does not.
fect the function, please keep it to 100 m or shorter.
 may still occurr if the surge is applied repeatedly. When a load such as a relay
is diriectly driven, use a type of switch with a built-in surge absorbing element.
5. Cautions for use in an interock circuit

Interlock signal requiring high reliability, devise a double interlock system to
wita trouble by providing a mechanical protection function, or by also using another switch (sensor) together
with the ato swith with the auto switch.
Also perform periodic maintenance and confirm proper operation.
2. Ensure sufficient clearance for maintenance activities. When designing an application, be sure to allow sufficient clearance for maintenance and inspections.

## Mount / adjustmen

1. Do not drop or bump.
Do not trop. bump or aply excessive impacts ( $1000 \mathrm{~m} /{ }^{2}{ }^{2}$ or more for solid state switches) while handling.
Althought the body of the switch may not be damaged, the inside of the switch could be damaged and cause a Do not carry a actuator by the auto switch lead wires.
2. Do not carry a actuator by the auto switch lead wires.
Never carry a actuato by ts lead wires. पhis man not only cause broken lead wires, but it may cause internal
elements of the switch to be damaged by the stress.

## slip out of position.

## \. warning

4. Mount a switch at the center of the operating range.
Adjust the mounting position of an auto switch so tha
range in which a switch is 0 N). (The mounting position shown in the catalog indicates the optimum position at stroke end.). If
be unstable.
Wiring
. Avoid repeatedly bending or stretching lead wires.
Brokene lead ivires can result from wiring patterns which repeatedly apply bending stress or stretching force to
the lead wires. the lead wires.

## insulation of wiring.

4. Do not allow short circuit of laads.
 5. Avoid incorrect wiring.
If incorrect wiring, the switches will be damaged.
6. When stripping the cable envelope, please pay attention to the stripping direction.
Insulator might be split or hurt dependaing on the directions.

## Operating environment

1. Do not use in an area where a magnetic fifld is generated.
an become demagnetized
 switthes in applications where continually exposed to water splash or spray. Poor insulation or swelling of the
potting resin inside switches may cuuse malfunction.
2. Do not use in an environment with oil or chemicals.

chemicas. If auto switches are used under these conditions for even a short time, they may be adversely
affected $b$ in impoper insulation, malfunction due to swilling of the potting resin, or hardening of the lead wires.
3. Do not use in an environment with temperature cycles
onsuth
asc if sif sittenes are esed where there are temp
4. Do not use in an area where surgses are generated.
When there are units solenoid type lifter, high freq
amount of surge in the area around actuatorss with sonercy ynductection furrace, motor, etc.) which generate a large
damage to the switches. Avoid sources of surge generation and crossed lises.
. Avoid accumulation of iron waste or close contact with magnetic substances.
something attracted by a magnet) is brought into close proximity with an auto switco, Maintenance
5. Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch
mafunction.
1) Securlery tighten switch mounting screvs.
If screws become loose or the mounting $\qquad$ 2) Cosition. $\begin{aligned} & \text { Phimat that there is no damage to lead wires. }\end{aligned}$
2) Confirm that there is no damage to lead wires.
To prevent faulty insulation, replace switches or repair lead wires, etc., if damage is discovered.

Others

1. For durability against water, elasticity, application at welding site, please consult us.

Switch should only be used Auto Switch of direct mounting specification.

## 4 INTENDED CONDITIONS OF USE

The auto switch should be used within the range of specifications below and the auto switch catalogue,
If labelled with $x$ : special conditions applied:
protect the autoswitch and cable against all in
impact or mechanical damage
Protect the autoswitch from sources of heat which can generate surface temperatures higher than the temperature
Classificitit rostect the autoswitch from direct sunlight or UV light using a suitable protective cover.

| Switch model number | D-M9N(V) | D-M9P(V) | D-M9B(V) |
| :---: | :---: | :---: | :---: |
| Wiring | 3 wire |  | 2 wire |
| Output | NPN | PNP | - |
| Application | IC circuitRelay PLC |  | 24 V DC ReaypLC |

## 5 NAMES AND FUNCTIONS OF INDIVIDUAL PARTS

D－M9NV－588／D－M9PV－588／D－M9BV－588

## 6 HOW TO MOUNT／MOUNTING BRACKET

Each actuator has a specified mounting bracket when mounted to the autoswitch．
When an autoswitch is mounted for the first time，please ensure the actuator is magnet built－in type，then prepare
brackets correspond to the actuator．
