## Installation \& Maintenance Manual

## Auto Switch (Reed switch type)

## Series D-R731-588 / D-R732-588

## D-R801-588 / D-R802-588

 Read this manual before using tnis product.
For future reference, please keep this manual in a safe place. This manual should be read in conjunction with the current catalogue 1.1 General recommendation

These safety instructions are intended to prevent a hazardous ese instructions indicate the "Caution", "Warning" or "Danger".
To ensure safety of personnel and equipmen his manual and the product catalogue must be observed, along with other relevant safety practices.

| ¢ Caution | Operator error could result in injury or equipment damage. |
| :---: | :---: |
| ¢ W Warning: | Operator error could result in serious injury or loss of life. |
| , ¢ Dan | In extreme conditions, there is a possible result of serious injury or loss of life. |

## TEX Marking descriptio

I 3D tD A22 IP67 T93${ }^{\circ} \mathrm{C} \times$
Equipment Group II

Gas (G) and Dust (D) environment
Ex - European standards apply
AA - Non-sparking apparatus
II - for all types of gas
ID - protected by
A22 - for zone 22
IP67- Protection structure Ta - Ambient temperature T $93^{\circ} \mathrm{C}$ - max. surface temperature

T5- temperature classification

- special conditions apply,

2. INSTALLATION AND OPERATING ENVIRONMENT

## § Warning

Design and selection
(1) Confirm the specifications

Read the specifications carefully and use this product appropriately. The
product may be damaged or malfunction if it is used outside the range of product may be damaged or malfunction if it is used outside the
specifications for load current, voltage, temperature or impact.
(2) Take precautions when multiple actuatorss are used close together When two or more auto switch actuators are lined up in close proximity to each other,magnetic field interference may cause the switches
malfunction. Maintain a minimum actuator separation of 10 mm . (When the allowable interval is specified for each actuator series, use the (When the allowabi
indicated value)
(3) Keep wiring as short as possible
As the length of the wiring to a load
switching ON on load gets longer, the rush current at Switching
(The switch will stay ON all the time.).
Use a contact protection box when the wire length is 5 m or longer.
(4) Pay attention to the internal voltage drop of the switch. 1) Switches with an indicator light

If auto switches are connected in series as shown below, take note that light emitting diodes. (Refer to internal voltage drop in the auto switch
specifications.)
The voltage drop will be " $n$ " times larger when " $n$ " auto switches are connected.]

$$
\stackrel{-}{1}
$$

- In the same way, when operating below a specified voltage, alth-ough an auto switch may operate normally, the load may not operate.
Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.
$\begin{aligned} & \text { Supply } \\ & \text { voltage }\end{aligned}-\begin{aligned} & \text { Internal voltage } \\ & \text { drop of switch }\end{aligned}>\underset{\text { Minimum operating }}{\text { voltage load }}$

2) If the internal resistance of a light emitting diode causes a problem
select a switch without an indicator light (MODEL $D$-R80-588)
(5) select a switch without an indicator light (MODEL D-R80-58

Do not use a load that generates surge voltage.
If driving a load such as a relay that generates a surge voltage, use a contact
(6) protection box.

Cautions for use in an interlock circuit
When an auto switch is used for an interlock
When an auto ssitch is used for an interlock signal requiring high reliability
devise a double interlock system to avoid trouble by providing a mechent protection function, or by also using another switch (sensor) together with the auto switch.
(2) Also perform periodic maintenance and confirm proper operation. When designing an application, be sure to allow sufficient clearance for maintenance and inspections.

## ! Warning

Mount / adjustment
(1) Do not drop or bump

Do not drop, bump or apply excessive impacts $300 \mathrm{~m} / \mathrm{s}^{2}$ or more for reed damaged, the inside of the switch could be damaged and cause a malfunction.
(2) Do not carry a actuator by the auto switch lead wires. ever carry an actuator by its lead wires. This may not only cause broken My the stress.
(3) Mount switches using the proper tightening torque.
If a switch is tightened beyond the range of tightening torque If a switch is tinteneercets or switch may be damaged Screws, mounting brackets or switch may be damaged.
On the other hand, tightening below the range of tightening torque may allow the switch to slip out of position.
(4) Mount a switch at the center of the operating range.
Adjust the mounting position of an auto switch so that the Adjust the mounting position of an auto switch so that the magnet stops at the center of the operating range (the range in which a switch is ON)
(The mounting position shown in the catalog indicates the optimum The mounting position shown in the catalog indicates the optimum
position at rotation end.) If mounted at the end of the operating range
around the borderline of ON and OFF), operation may be unstable.
Wiring
Avoid repeatedly bending or stretching lead wires
Broken ead wires can result from wiring patterns which repeatedly apply
(2) Be sure to cornect the load before power is applied.

If the power is turned $O N$ when an auto switch is not connected to a
load, the switch will be instantly damaged because f excess
${ }^{3}$ Confirm proper insulation of wiring. circuits, ground fault, improper insulation between terminals, etc.)
Damage may occur due to excess current flow into a switch.
Do not wire with power lines or high voltage lines.
Wire separatelly from power lines or high voltage lines, avoiding parallel wiring
or wiring in the same conduit with these lines. Control circuits containing auto switches may malfunction due to noise from these other lines.
(5) Do not allow short circuit of loads

If the power is turred ON with a load in a short circuited condition, the switch will be instantly damaged because of excess current flow into the
switch.. switch...
Avoid incorrect wiring
A 24 VDC switch with indicator light has po
(+), and the blue

1) 1 Ilack] lead wire is () . emitting diode will not light up. Also note that a current greater than that specified will damage a light emitting diode and it will no longer operate.
Operating environment
(1) Do not use in an area where a magnetic field is generated. can becom
Do not use in an environment where the auto switch will be continually exposed to water.
Although switches satisfy IEC standard IP67 construction (JIS C 0920: watertight construction), avoid using switches in applications where continually exposed to water splash or spray. Poor insulation or swelling of the potting resin
inside switches may cause malfunction.
(3) Do not use in an environment with oil or chemicals cleaning solvent, various oils or chemicals. If auto switches are used unde hese conditions for even a short time, they may be adversely affected by improper insulation, malfunction due to swelling of the potting resin, or mproper insulation, maliunc
2) Do not use in an environment with temperature cycles. Oonsult SMC if switches are used where there are temperature cycles other than normal air temperature changes, as there may be adverse
effects inside the switches.
nment where there is excessive impact shock.
heen excessive impact $\left(300 \mathrm{~m} / \mathrm{s}^{2}\right.$ or more) is applied to a reed switch during operation, the contact point will malfunction and generate or cut off a signa momentarity ( ms or less). Consult sMC regar
state switch depending upon the environment.

## Warning

(6) Avoid accumulation of iron waste or close contact with When a large amount of iron waste such as machining chips or spatter is accumulated, or a magnetic substance (sometthing attracted by a magnet) is brought into close proximity with an auto switch actuator, it may cause auto switches to malfunction due to a loss of the magnetic force inside Mintenance
(1) Perform the following maintenance periodically in order to prevent possible danger due to unexpected auto switch malfunction.

1) Securely tighten switch mounting screws.

If screws become loose or the mounting position is dislocated
retighten them after readjusting the mounting po
2) Confirm that there is no damage to lead wires.
To prevent faulty insulation, replace switches or repair lead
wires, etc., if damage is discovered.
wires, etc. if damage is discovered.
Others
(1) For durability against water, elasticity, application at
welding site, please consult us.
(2) If ON and OFF position (hysteresis) cause problems, p.
consult us.

This product is a Reed Switch type Auto Switch of direct mounting specification.
Switch should only be used in areas in which potentially explosive atmospheres are unlikely to be present or only present for short periods of time.
4.INTENDED CONDITIONS OF USE

The auto switch should be used within the range of
specifications below and the auto switch catalogue.
If labelled with X : special conditions apply:
Protect the autoswitch and cable against all impact or mechanica damage
Protect the autoswitch from sources of heat which can generate surface temperatures higher than the temperature classification.
Protect the autoswitch from direct sunlight or UV light using a suitable protective cover.

5.Names and Functions of Individual Parts

When an autoswitch is mounted for the first time, please ensure the actuator is "with switch unit" type.
Please refer to the actuator catalogue for switch unit.

(1) Loosen the swith mounting screw on the auto switch unit and inser (2) the auto switch arm. Fix the switch mounting screw by tightening it.

- How to change detecting position of auto switch
(1) When changing the detecting position of the auto switch, loosen the position required.

2) Fix the set screw by tightening it.

- When fixing the auto switch

Tightening torque for the switch mounting screw: around 0.49 Nm Tightening torque for the switch block set screw: around 0.49 Nm

## 7.Basic wiring

D-R801/R802

Connection with PLC (sequence controller)

| :---: | :---: |
| Sink input | Sink output |
| Source input | Source output |

8.Exterior dimension

D-R732-588

## .Check flow

When detection failure occurs (stays On/OFF), please check the switch according to the following chart

A --- Autoswitch failure
(B) --- Replace actuator. Detectable magnetic field inadequate (or no magnet)
© --- Correct wiring, replace load or replace autoswitch after correcting the wiring
(2) --- After checking the operating environment, replace autoswitch
(E) --- Replace autoswitch after correcting the wiring
