

Installation and Maintenance Manual Series IP8101 Smart Positioner (Rotary type)

Read this manual before using this product

- The information within this document is to be used by pneumatically trained personnel only.
- For future reference, please keep manual in a safe place.
- This manual should be read in conjunction with the current catalogue.

1 SAFETY RECOMMENDATION

1.1 General recommendation

These safety instructions are intended to prevent a hazardous situation and/or equipment damage. These instructions indicate the level of potential hazard by label of "Caution", "Warning" or "Danger". To ensure safety, be sure to observe ISO4414 (^{Note1}), JIS B 8370 (^{Note2}) and other safety practices.

CAUTION: Operator error could result in injury or equipment damage.

WARNING: Operator error could result in serious injury or loss of life.

DANGER: In extreme conditions, there is a possible result of serious injury or loss of life.

Note 1: ISO 4414: Pneumatic fluid power - General rules relating to systems.

Note 2: JIS B 8370: Pneumatic system axiom.

WARNING:

- The compatibility of pneumatic equipment is the responsibility of a person who designs the pneumatic system or decides its specification.**
 - Since the products specified here are used in various operating conditions, their compatibility for the specific pneumatic system must be based on specifications or after analysis and/or tests to meet your specific requirements.
- Only trained personnel should operate pneumatically operated machinery and equipment.**
 - Compressed air can be dangerous if an operator is unfamiliar with it. Assembly, handling or repair of pneumatic systems should be performed by trained and experienced operators.
- Do not service machinery/equipment or attempt to remove components until safety is confirmed.**
 - Inspection and maintenance of machinery/equipment should only be performed after confirmation of safe of dangerous fluid.
 - When equipment is to be removed, confirm the safety process as mentioned above. Switch off air and electrical supplies and exhaust all residual compressed air in the system.
 - Before machinery/ equipment is re-started, ensure all safety measures to prevent sudden movement of cylinders etc. (Bleed air into the system gradually to create backpressure, i.e. incorporate a soft-start valve).
- Contact SMC if the product is to be used in any of the following conditions:**
 - Conditions and environments beyond the given specifications, or if product is used outdoors.
 - Installation on equipment in conjunction with atomic energy, railway, air navigation, vehicles, medical equipment, food and beverages, recreation equipment, emergency stop circuits, press applications, or safety equipment.
 - An application, which has the possibility of having negative effects on people, property, or animals, requiring special safety analysis.

CAUTION:

- Ensure that the air supply system is filtered to 0.3 micron.

1 SAFETY RECOMMENDATION (CONTINUED)

1.2 Specific recommendations

- If the input current is disconnected during use, the output of OUT1 will become 0MPa and the output of OUT2 will reach its maximum, regardless of the operating direction of the parameter mode (parameter code: 200), whether direct or in reverse.
- If reverse operation is selected in parameter mode (parameter code: 200), when the power supply is turned off, OUT1 output will become 0MPa and the positioner will start moving toward input current 20mADC direction.
- Depending on the parameter's setting, the actuator will move erratically when an input current of 4mA DC is applied.
- There is a capacitor for noise prevention between FG terminal (case) and each input / output terminal of the positioner respectively. Therefore, avoid conducting withstand voltage testing or insulation resistance testing between the terminal and case.
- Please refer to the Operation manual for further details.

2 INTENDED CONDITIONS OF USE

2.1 Specifications

Protect the unit from impact and dropping during installation and when mounted. This may cause failure of the unit.

- Do not use the unit in places with high humidity & temperature. This may cause malfunctions.
- Do not use this positioner outside of the range of its specifications as this can cause failure.

Table1 Specifications

Item	Model
Input current	IP8101-03*-*-Q 4-20mADC* (2 wire system, separate power source not necessary)
Minimum current	3.85mADC or more
Voltage between terminals	12VDC (Input resistance equivalent to 600Ω, at 20mADC)
Max. supply power	1W * (100mADC, 28VDC)
Supply air pressure	0.3~0.7MPa
Standard stroke	60°~100°* ³
Sensitivity	±0.2% F.S. or less* ⁴
Linearity	±1% F.S. or less* ⁴
Hysteresis	0.5% F.S. or less
Repeatability	±0.5% F.S. or less* ⁴
Temperature coefficient	0.05% F.S./°C or less
Max. output flow rate	200 l/min (ANR) or more (SUP=0.4MPa)* ⁵
Air consumption	11 l/min (ANR) or more (SUP=0.4MPa)* ⁵
Ambient and operating fluid temperature	-20°C~80°C
Classification of degree of protection	JISF8007 IP65 (Conforms to IEC 60529)
Communication Protocol	HART communication (option)
Air connection ports	Rc1/4 female thread (or G1/4 or 1/4NPT)
Electrical connections	G1/2 female thread (or 1/2NPT or M20x1.5)
Material	Body/Cover: Die cast aluminium (Coating: Epoxy resin paint) Shaft/Screw: Stainless
Weight	Approx. 2.6kg

Table2 Specifications of options

Item	Model
Alarm output1, 2*	IP8101-032*-*-Q
Wiring method	2 wire system
Power supply voltage	10~28VDC
Load current	10~40mADC * ⁷
Internal resistance	350Ω±10
Current leakage	0.5mADC or less
Response time	50msec or less
Analogue output * ⁸	
Wiring method	2 wire system
Supply source voltage	10~28VDC
Output current	4~20mADC
Load resistance	0~750Ω
Accuracy	±0.5%F.S or less* ⁹

2 INTENDED CONDITIONS OF USE (CONTINUED)

*1: 1/2 split range is available using the split range setting (parameter code: 300).

*2: <Ex.> When applying an input current of 80mA DC, an input power supply voltage of 12.5V DC or less will prevent damage to the positioner.

Max. supply power = 80mA DC×12.5V = 1W

*3: If the actuator rotating angle is 100° or less, its stroke can be adjusted optionally in a range from 0 to 60° and from 0 to 100°.

*4: Linearity is a characteristic checked without loads using a factory inspection machine. The positioner can not work independently and is used as a part of loop including actuating equipment such as a valve, actuator and DCS. Therefore, it should be noted that the described characteristic values may vary depending on the loop conditions.

*5: (ANR) indicates standard air in accordance with JIS B0120.

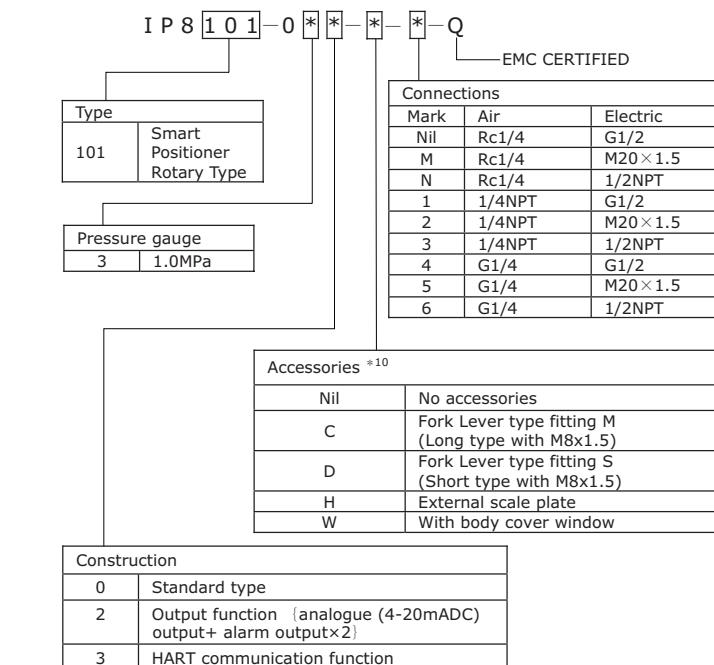

*6: When no input current has been applied, an alarm is output. Fig. 1 shows an internal alarm circuit.

*7: 10mADC or more load current is needed to operate the main circuit of the internal switch, and it should be 40mADC or less to protect the internal resistance circuit. Therefore, use a power supply voltage and load resistance with a load current of 10 to 40mADC when the output is on.

*8: Connect a load resistance with consideration given to the minimum power supply voltage.

*9: Analogue output accuracy to position value (P value) in the LCD display.

2.2 How to Order

*10: If two or more accessories are required, the part numbers should be made in alphabetical order.

3 INSTALLATION

3.1 Environment

WARNING:

- Do not install unless the safety instructions have been read and understood.
- Avoid hitting the product with metallic objects.
- Avoid using this product in non-explosive environments which can become explosive due to air leakage.
- If the system is in possible danger because of failure of the positioner, prepare the system with an alternative safety circuit to avoid danger.

3.2 Piping

3 INSTALLATION (CONTINUED)

• Do not mount the product near the source of electrical noise.

• Do not mount the product in a location where it is exposed to radiant heat.

• Allow sufficient space for maintenance and adjustment around the product when mounted.

3.2 Piping

CAUTION:

- Before piping make sure to clean up chips, cutting oil, dust etc.
- When installing piping or fitting into a port, ensure that sealant material does not enter inside the port. When using seal tape, leave 1.5 to 2 threads exposed on the end of pipe / fitting.
- Use de-humidified and dust-removed clean air as the supplied air source.
- The Positioner has very fine internal paths. Therefore please use clean air which is dehydrated and filtered, and also avoid using lubricant. In addition, use a cleaning system according to No. 4 or higher from the "■ Compressed Air Cleaning Equipment" listed in the manual for the air-supply cleaning systems.
- Avoid using compressed air containing chemicals, synthetic fluid including organic solvent, salinity, and corrosive gas as it may cause malfunction.

3.3 Electrical connection

CAUTION:

- Be sure to perform electrical wiring with the input current turned off.
- Be sure to use a grounding to prevent noise from interrupting input current and static electricity from damaging the positioner.
- Do not touch around the actuator axis when applying an input current after electrical wiring.
- Use an input current source (4 to 20mA DC) with a secure 12V DC or greater voltage as close as possible to the input current terminal to avoid voltage drops.

3.4 Mounting

WARNING:

- Confirm the positioner is securely and firmly mounted onto the actuator.
- Be careful not to get fingers caught when matching mounting positions.

CAUTION:

- Be sure to keep the necessary space available for maintenance work (piping, wiring, adjustment, etc.) in your setup location.
- Disconnect the supply pressure and ensure compressed air is discharged from the positioner and actuator completely before starting mounting.

3.5 Lubrication

CAUTION:

- The positioner has a fixed orifice and nozzle, which contain fine internal paths. Use filtered, dehydrated air and avoid the use of lubricants as this may cause malfunction of the positioner. Ensure that the air supply system is filtered to 0.3 micron.

3.6 Handling

CAUTION:

- Avoid applying impact to the body and torque motor of the positioner, and avoid excessive force to the armature because it may lead to failure. Handle with care during transportation and operation.
- If the positioner is left unused at the operation site for an extended period, ensure the body cover unit is fitted, and mount a plug on the wiring and piping ports. If the atmosphere is of high temperature or high humidity, take measures to avoid condensation inside the positioner. The condensation control measures must be taken thoroughly during export shipment.
- Be sure to mount the body cover unit when using the positioner. IP 65 cannot be guaranteed if the mounting condition of the body cover is incorrect. To achieve IP capability, tighten the screws with the appropriate torque (2.8 to 3.0Nm).
- When the External scale plate (option H) is selected, the scale plate indicator moves with the actuator. Take care to keep hands clear during actuator operation.

4 WORKFLOW OF IP8101 POSITIONER SETUP

The workflow of IP8101 smart positioner from set-up to initial adjustment is shown below. Follow this flow when performing set-ups and adjustments of the positioner. Please refer to the manual for details.

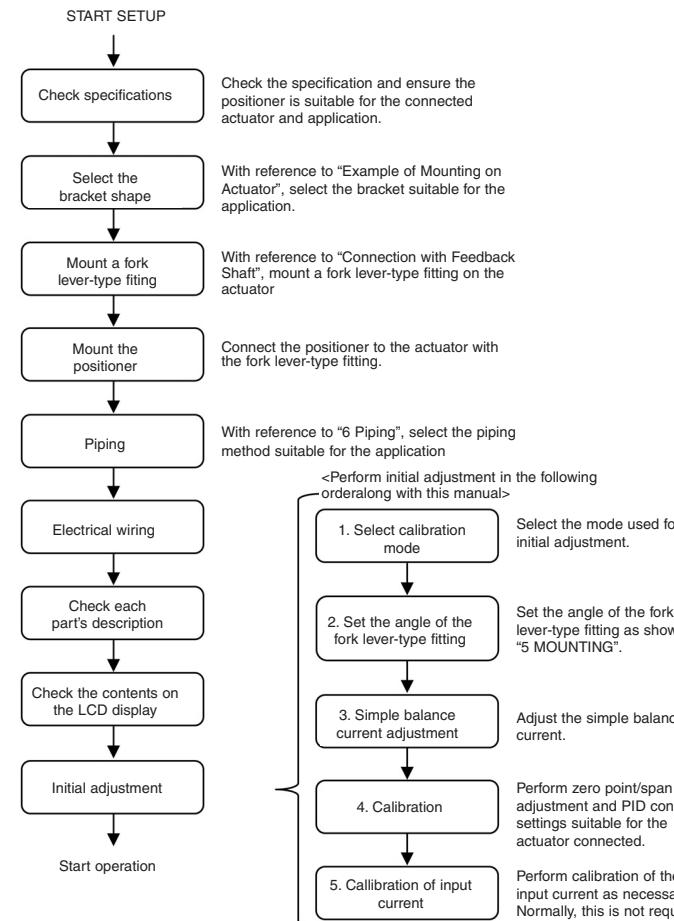

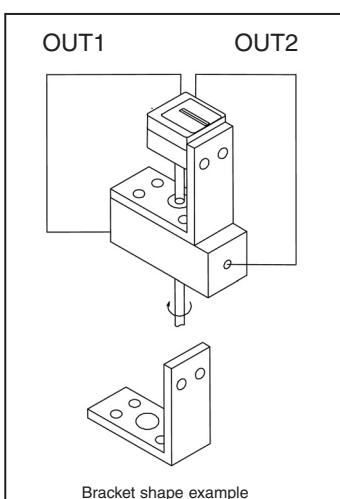

Fig. 2

5 MOUNTING

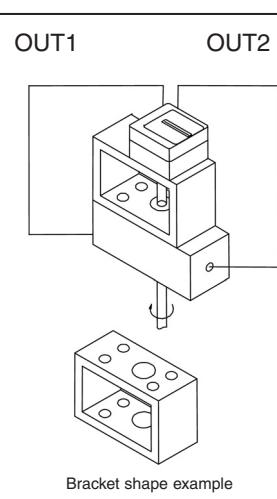

■ Example of Mounting on Actuator

The IP8101 Smart Positioner offers interchangeability in mounting pitch with the IP610, IP6100 and IP8100 Positioners. Therefore, it is possible to apply a bracket for IP610, IP6100 and IP8100 for mounting. However, if an IP6100 is replaced with this positioner and accessory H (with an external scale plate) is selected, it will be necessary to lower the position of the fork lever-type fitting.

Example of screw mounting to the side of the positioner.
Mount using the hole on the side face of the positioner and on the top of the actuator.

Fig. 3

Example of screw mounting to the back of the positioner.
Mount by using the holes on the rear of the positioner and the top of the actuator.

Fig. 4

5 MOUNTING (CONTINUED)

■ Connection with Feedback Shaft

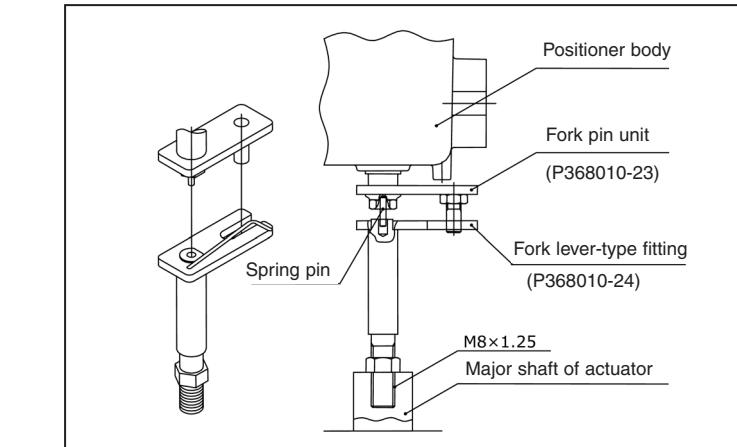

Fig. 5

- (1) Screw in a fork lever-type fitting to the major shaft of actuator and adjust its height to avoid interference with the fork pin unit.
- (2) Adjust the angle of the fork lever-type fitting to avoid interference with the positioner body while the actuator is fully opening from a fully-closed condition.
- (3) Mount so that the feedback shaft of the positioner and major shaft of actuator are almost aligned (where the spring pin at the end of the feedback shaft engages with a hole at the end of the fork lever-type fitting axis).

■ Fork lever-Type Fitting

Table 3

Description	Part no.
Fork lever-type fitting M	P368010-24
Fork lever-type fitting S	P368010-25

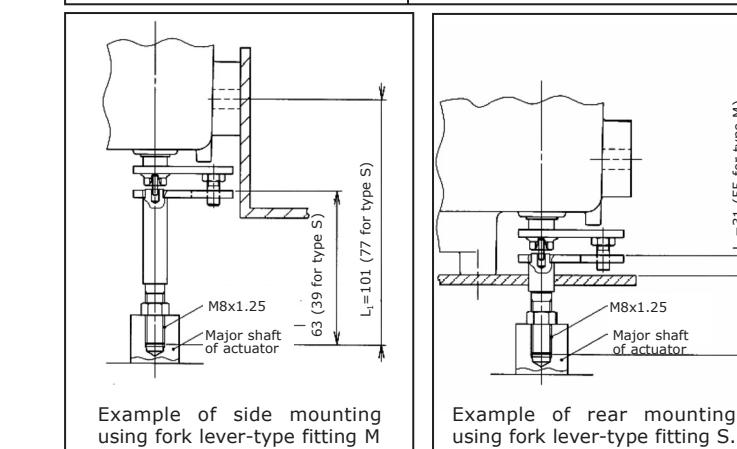

Fig. 6

Fig. 7

6 PIPING

Table 4

	Single action		Double action	
	Normal operation	Reverse operation	Normal operation	Reverse operation
Actuation: The actuator main shaft turns clockwise when the input current increases	Main shaft Single acting actuator OUT1: Plug OUT2: Plug	Main shaft Single acting actuator OUT2: Plug OUT1: Plug	Main shaft Double acting actuator OUT1: Plug OUT2: Plug	Main shaft Single acting actuator OUT2: Plug OUT1: Plug
Actuation: The actuator main shaft turns counter-clockwise when the input current increases. (Reverse actuation using the normal actuation drive unit.)		Actuation: The actuator main shaft turns counter-clockwise when the input current increases. (Reverse actuation using the normal actuation drive unit.)		Actuation: The actuator main shaft turns counter-clockwise when the input current increases

7 ELECTRICAL WIRING

■ Without Output Function (IP8101-030, IP8101-033)

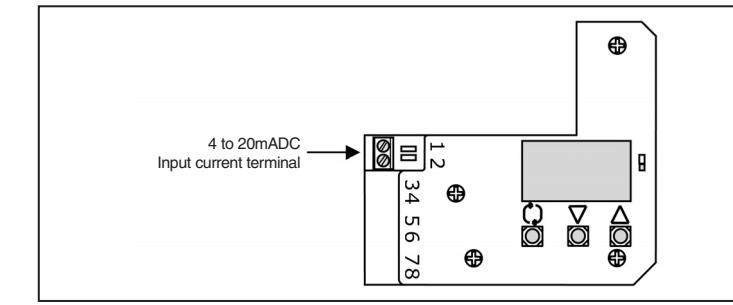

Fig. 8

- (1) Remove the positioner body cover.
- (2) Connect the input current wiring from an adjusting meter (controller) following Fig. 8.

■ With Output Function (IP8101-032)

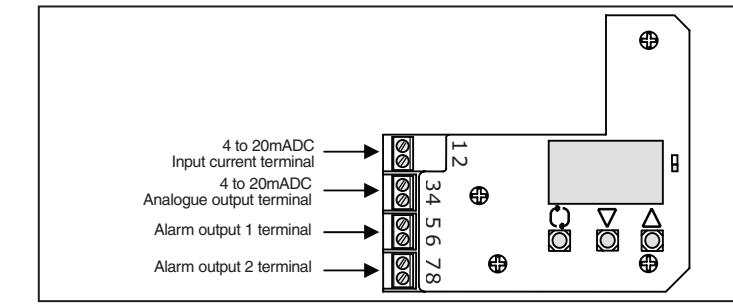

Fig. 9

- (1) Remove the positioner body cover.
- (2) Connect input current wiring from an adjusting meter (controller) and each output wiring following Fig. 9.

8 DESCRIPTION OF COMPONENTS

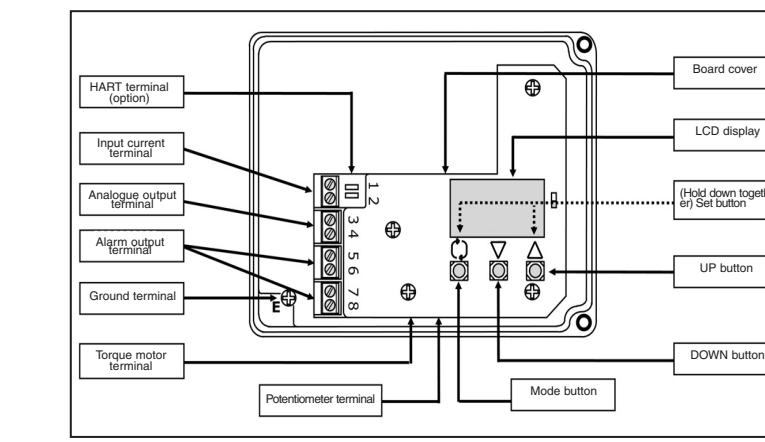

Fig. 10

9 MAINTENANCE

■ WARNING:

- Do not dis-assemble the product. A product which has been dis-assembled cannot be guaranteed. Consult with SMC if dis-assembly is necessary.
- After installation, repair and dis-assembly, connect compressed air and perform a proper functional test and leak test. If bleed noise is louder than the initial state or operation is abnormal, stop operation and check if installation is correct or not.

■ CAUTION:

- Check if supply air is clean. Inspect compressed air cleaning system periodically so that dust, oil and humidity, which can cause malfunction and failure of the unit, do not enter the equipment.
- If handled improperly, compressed air can be dangerous. Maintenance and replacement of unit parts should only be performed by trained and experienced personnel for instrumentation equipment, as well as following the product specifications.

9 MAINTENANCE (CONTINUED)

- Check the positioner once a year. If excessively worn diaphragms, O-rings or seals are found, or any unit that has been damaged, replace with new units. Treatment at an early stage is especially important if the positioner is used in a place of severe environment like coastal area.
- Before removing the positioner for maintenance or replacing unit parts after installation, make sure the supply pressure is shut off and all residual air pressure is released from piping.
- When the fixed orifice is clogged with carbon particles or others, remove the pilot valve unit Auto/Manual switch screw (built-in fixed orifice) and clean it by inserting a f0.2 wire into the aperture. If it must be replaced with a new one, stop the supply pressure and remove the stopper screw of the pilot valve unit.
- When disassembling the pilot valve, coat grease on the O-ring of the sliding section. (Use TORAY SILICONE SH45 grease)
- Check for air leaks from the compressed air piping. Air leaks could lower the performance characteristics of the positioner. Air is normally discharged from a bleed port, but this is necessary air consumption based on the construction of the positioner, and is not an abnormality if the air consumption is within the specified range.
- When replacing piping to change the operating direction, be sure to perform span adjustment (parameter code: C70).
- When removing the positioner from the actuator and mounting it onto another actuator, malfunctions may occur due to its retained initial constant. Therefore, when it is mounted onto other actuators, transmit the input current while cutting the air supply, and shift to parameter mode for adjustments.
- The balance current will change depending on the positioner orientation. Adjust the balance current (parameter code: C60) every time the orientation changes.

10 LIMITATIONS OF USE

■ WARNING:

- Do not exceed any of the specifications laid out in section 2 of this document or the specific product catalogue.
- Read thoroughly and understand the operation manual before operation of this product.
