# Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of "Caution," "Warning" or "Danger." They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) and other safety regulations.

\*1) ISO 4414: Pneumatic fluid power - General rules and safety requirements for systems and their components ISO 4413: Hydraulic fluid power - General rules and safety requirements for systems and their components IEC 60204-1: Safety of machinery - Electrical equipment of machines - Part 1: General requirements ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1:Robots

# Danger

**Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

# Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

- 2. Only personnel with appropriate training should operate machinery and equipment. The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.
- 3. Do not service or attempt to remove product and machinery/equipment until safety is
  - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
  - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
  - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- 4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not covered.
  - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
  - 2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogs and operation manuals.
  - 3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

# **Safety Instructions**

# Caution

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries.

Use in non-manufacturing industries is not covered.

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

# Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".

Read and accept them before using the product.

# **Limited warranty and Disclaimer**

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2)
  - Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
  - This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

## \*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.

Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty

# **Compliance Requirements**

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

# **Operator**

- ♦ This operation manual is intended for those who have knowledge of machinery using pneumatic equipment, and have sufficient knowledge of assembly, operation and maintenance of such equipment. Only those persons are allowed to perform assembly, operation and maintenance.
- ♦ Read and understand this operation manual carefully before assembling, operating or providing maintenance to the product.

## ■Precautions

# **Marning**

■Do not disassemble, modify (including changing the printed circuit board) or repair. An injury or failure can result.

■Do not operate or set with wet hands.

This may lead to an electric shock.

■Do not operate the product outside of the specifications.

Do not use for flammable or harmful fluids.

Fire, malfunction, or damage to the product can result.

Verify the specifications before use.

■Do not operate in an atmosphere containing flammable or explosive gases.

Fire or an explosion can result.

This product is not designed to be explosion proof.

- ■If using the product in an interlocking circuit:
- •Provide a double interlocking system, for example a mechanical system.
- •Check the product regularly for proper operation.

Otherwise malfunction can result, causing an accident.

# **^**Caution

- ■When handling, assembling or replacing the units:
- •Avoid touching any sharp metal parts of the connectors for connecting units.
- •When assembling units, take care not to get any fingers caught between units. Injury can result.
- •When disassembling units, take care to avoid excessive force.

The connection parts of the unit are firmly joined with seals and injury can result.

■After maintenance is complete, perform appropriate functional inspections.

Stop operation if the equipment does not function properly.

Safety cannot be assured in the case of unexpected malfunction.

■ Provide grounding to assure the noise resistance of the Fieldbus system. Individual grounding should be provided close to the product with a short cable.

#### **■NOTE**

- o Follow the instructions given below when designing, selecting and handling the product.
  - The instructions on design and selection (installation, wiring, environment, adjustment, operation, maintenance, etc.) described below must also be followed.
  - \*Product specifications
  - •The direct current power supply to combine should be UL1310 Class 2 power supply when conformity to UL is necessary.
  - •Use the specified voltage.
  - Otherwise failure or malfunction can result.
  - •Reserve a space for maintenance.
  - Allow sufficient space for maintenance when designing the system.
  - •Do not remove any nameplates or labels.
  - This can lead to incorrect maintenance, or misreading of the operation manual, which could cause damage or malfunction to the product.
  - It may also result in non-conformity to safety standards.
  - •Beware of inrush current when the power supply is turned on.
  - Some connected loads can apply an initial charge current which will activate the over current protection function, causing the unit to malfunction.

### Product handling

- \*Installation
- •Do not drop, hit or apply excessive shock to the SI unit.

Otherwise damage to the product can result, causing malfunction.

Tighten to the specified tightening torque.

If the tightening torque is exceeded the mounting screws may be broken.

IP67 protection cannot be guaranteed if the screws are not tightened to the specified torque.

•If a large manifold valve is mounted, lift the unit so that stress is not applied to the connecting part while transporting.

The stress may cause breakage of the connecting part. The unit may become very heavy depending on the combination. Transportation/installation shall be performed by multiple operators.

•Never mount a product in a location that will be used as a foothold.

The product may be damaged if excessive force is applied by stepping or climbing onto it.

#### \*Wiring

•Avoid repeatedly bending or stretching the cables or placing heavy load on them.

Repetitive bending stress or tensile stress can cause breakage of the cable.

Wire correctly.

Incorrect wiring can break the product.

•Do not perform wiring while the power is ON.

Otherwise damage to the SI unit and/or input or output device can result, causing malfunction.

•Do not route wires and cables together with power or high voltage cables.

Otherwise the SI unit and/or input or output device can malfunction due to interference of noise and surge voltage from power and high voltage cables to the signal line.

Route the wires (piping) of the SI unit and/or input or output device separately from power or high voltage cables.

Confirm proper insulation of wiring.

Poor insulation (interference from another circuit, poor insulation between terminals, etc.) can lead to excess voltage or current being applied to the product, causing damage.

•Take appropriate measures against noise, such as using a noise filter, when the Fieldbus system is incorporated into equipment.

Otherwise noise can cause malfunction.

#### \*Environment

•Select the proper type of protection according to the environment of operation.

IP67 protection is achieved when the following conditions are met.

- (1) The units are connected properly with fieldbus cable with M12 connector and power cable with M12 (M8) connector.
- (2) Suitable mounting of each unit and manifold valve.
- (3) Be sure to fit a waterproof cap on any unused connectors.

If using in an environment that is exposed to water splashes, please take measures such as using a cover.

Do not use in an environment where moisture or water vapor are present. Otherwise failure and malfunction can result.

•Do not use in a place where the product could be splashed by oil or chemicals.

If the product is to be used in an environment containing oils or chemicals such as coolant or cleaning solvent, even for a short time, it may be adversely affected (damage, malfunction etc.).

- •Do not use the product in an environment where corrosive gases or fluids could be splashed. Otherwise damage to the product and malfunction can result.
- •Do not use in an area where surges are generated.

If there is equipment generating large surge near the unit (magnetic type lifter, high frequency inductive furnace, welding machine, motor, etc.), this can cause deterioration of the internal circuitry element of the unit or result in damage. Take measures against the surge sources, and prevent the lines from coming into close contact.

•When a surge-generating load such as a relay, valve or lamp is driven directly, use a product with a built-in surge absorbing element.

Direct drive of a load generating surge voltage can damage the unit.

- •The product is CE/UKCA marked, but not immune to lightning strikes. Take measures against lightning strikes in the system.
- •Prevent foreign matter such as dust or wire debris from getting inside the product.
- •Mount the product in a place that is not exposed to excessive vibration or impact.

Otherwise failure or malfunction can result.

Do not use the product in an environment that is exposed to temperature cycle.

Heat cycles other than ordinary changes in temperature can adversely affect the inside of the product.

•Do not expose the product to direct sunlight.

If using in a location directly exposed to sunlight, shade the product from the sunlight.

Otherwise failure or malfunction can result.

•Keep within the specified ambient temperature range.

Otherwise malfunction can result.

•Do not operate close to a heat source, or in a location exposed to radiant heat.

Otherwise malfunction can result.

#### \*Adjustment and Operation

•Set the switches by using a sharp-pointed screwdriver etc. When setting the switch, do not touch other unrelated parts.

This can cause parts damage or malfunction due to a short circuit.

•Perform settings suitable for the operating conditions.

Incorrect setting can cause operation failure.

•Please refer to the PLC manufacturer's manual etc. for details of programming and addresses.

For the PLC protocol and programming refer to the relevant manufacturer's documentation.

#### \*Maintenance

•Turn OFF the power supply, stop the supplied air, exhaust the residual pressure and verify the release of air before performing maintenance.

There is a risk of unexpected malfunction.

•Perform regular maintenance and inspections.

There is a risk of unexpected malfunction.

•After maintenance is complete, perform appropriate functional inspections.

Stop operation if the equipment does not function properly.

Otherwise safety is not assured due to an unexpected malfunction or incorrect operation.

•Do not use solvents such as benzene, thinner etc. to clean each unit.

They could damage the surface of the body and erase the markings on the body.

Use a soft cloth to remove stains.

For heavy stains, use a cloth soaked with diluted neutral detergent and fully squeezed, then wipe up the stains again with a dry cloth.

# **System Outline**

### System configuration

The EX600 range of units can be connected to various types of Fieldbus to realize the reduction of input or output device wiring and the distributed control system. The unit communicates with the Fieldbus through the SI unit. One SI unit can be connected with manifold valves with up to 32 outputs and the input • output • I/O units with maximum 10 units.

SI unit: Performs Fieldbus communication and solenoid valve manifold ON/OFF output.

Digital input unit: For connecting sensors with switch output capability. PNP and NPN types are available.

Digital output unit: For connecting output device such as solenoid valves, lamps, buzzers, etc. PNP and NPN types are available.

Digital I/O unit: This unit has both digital input and output functions. PNP and NPN types are available.

Analogue input unit: For connecting sensors with analogue output capability.

Analogue output unit: This can be connected to the equipment which can read analogue input.

Analogue I/O unit: This unit has both analogue input and output functions.

End plate: Connected at EX600 Manifold's D side, incorporating the power supply connection.

Solenoid valve manifold: An assembly of solenoid valves. One connector is used as the electric connection to all connected valves.

# ■Definition and terminology

|   | Terminology                          | Definition  |
|---|--------------------------------------|---|
| Α | Address<br>(Station Address)         | A number assigned to identify the unit connected onto the DeviceNet®. network. It must not be duplicated.   |
|   | AD value                             | The signal from the analogue input device is converted to digital, and displayed in decimal and hexadecimal. These hexadecimal and decimal values are also outputted to the analogue output device. |
| С | Communication speed                  | The speed at which the fieldbus sends and receives data. It depends on higher-level equipment (PLC, etc.) and is measured in bps (Bits per second).   |
|   | Current consumption                  | The current necessary to operate each unit.   |
| D | DIN rail                             | A metal rail conforming with DIN (German) standard.   |
|   | D Side                               | The side connected to the end plate when the product is connected to a manifold.  |
| Е | EDS                                  | Settable attribute information of a device (each parameter's object address, etc.) stored on external disk.   |
|   | Enclosure (IP□□)                     | Abbreviation of international (ingress) protection. A standard related to the protection from external objects (hands, steel ball, steel wire, dust, water, etc.) applied to the product.           |
| F | FE Abbreviation of functional earth. |   |
|   | Fieldbus                             | The protocol that uses digital communication to exchange signals between field equipment (instruments and actuators) running on site and a PLC.   |
| Н | Handheld Terminal (H.T.)             | Connected to the dedicated connector of the SI unit to adjust the internal parameters, monitor the status of all input and output signals, and turn ON input and output forcedly.                   |
| I | Idle                                 | Expression for PLC operation state. For details, Refer to manuals of each PLC maker. Depending on which PLC is used; the idle state might not be available.   |
| М | Manifold                             | A form consisting of multiple components. A form made by combining multiple components  |
|   | MAC ID                               | Abbreviation for Media-Access-Control Identifier. Node addresses identifier for the DeviceNet®.   |
| Ν | NPN input                            | Takes the sensor output that uses the NPN transistor to the signal output line.   |
|   | NPN output                           | The output type that uses an NPN transistor to operate output device. It is also known as a positive common type since a positive potential is applied to the power supply line.                    |
|   | Number of inputs                     | The number of points that can receive information from input device (sensor, switch, etc.).   |
|   | Number of outputs                    | The number of points that can operate output device (solenoid valve, light, motor, etc.).   |
| 0 | Open circuit detection               | A diagnosis function to detect if the input or output device wiring is disconnected.  |

|   | Terminology              | Definition   |  |
|---|--------------------------|--|--|
| Р | PLC                      | Abbreviation of programmable logic controller. A digital computer used for automation of electromechanical processes.  |  |
|   | PNP input                | Takes the sensor output that uses the PNP transistor to the signal output part.  |  |
|   | PNP output               | The output type that uses a PNP transistor to operate output device. It is also known as a negative common type since a negative potential is applied to the power supply line.        |  |
| S | Short circuit detection  | A diagnosis function to detect an over current due to the short circuit of the output and/or power supply positive line with respect to the GND line.                                  |  |
|   | Short circuit protection | A function to protect the internal circuit from being broken by an over current due to the short circuit of the output and/or power supply positive line with respect to the GND line. |  |
|   | SI unit                  | Abbreviation of serial interface unit. A unit connected to a PLC to communicate input and output data.   |  |
| Т | Terminal resistor        | A resistor mounted at either end of the fieldbus network.  |  |
| U | U Side                   | The side connected to the solenoid valve when the product is connected to a manifold.  |  |

# **Assembly**

- •Assembling the unit as a manifold
- \*: If the unit was purchased as a manifold, the work described in this section is not necessary.
- (1) Connect a unit to the end plate.

  Digital and Analogue I/O units can be connected in any order.

  Tighten the joint brackets to a torque of 1.5 to 1.6 N•m.

(2) Add more I/O units.

Up to 10 units (including the SI unit) can be connected to one manifold.

(3) Connecting the SI unit.

After connecting the required I/O units, connect the SI unit.

The method is as above in (1), (2).

## (4) Mounting the valve plate.

Mount the valve plate (EX600-ZMV#) to the valve manifold using the valve set screws. (M3 x 8) Apply 0.6 to 0.7 N•m tightening torque to the screws.

Screw mounting place SV : 2 places S0700 : 2 places VQC1000: 2 places VQC2000: 3 places VQC4000: 4 places SY : 2 places

## (5) Connect the SI unit to the valve manifold.

Insert the valve plate into the valve plate mounting groove on the side of the SI unit. Fix using the valve plate screws (M4 x 6) supplied, to torque of 0.7 to 0.8 N•m.

#### Precautions for handling

- •Please do not connect the unit while the power supply is active. It will cause equipment damage.
- •Take care not to drop the nuts of Joint bracket.
- •Tighten the screws securely using the specified torque.

  The product may not operate properly if the screws are loose.

# **Mounting and Installation**

#### ■Installation

- Direct mounting
- (1) When joining six or more units, fix the middle part of the complete EX600 unit with an intermediate reinforcing brace (EX600-ZMB1) before mounting, using 2-M4 x 5 screws.

  Tightening torque: 0.7 to 0.8 N•m.

(2) Mount and tighten the end plate at one end of the unit. (M4)

Tightening torque: 0.7 to 0.8 N•m.

Fix the end plate at the valve side while referring to the operation manual of the corresponding valve manifold.

n (Number of connected units) ≤ 10

## Precautions for handling

•When joining six or more units, fix the middle part of the units with an intermediate reinforcing brace to prevent connection failure between the units due to deflection.

#### DIN rail mounting

(Not available for SY series valves. Refer to the SY catalog.)

- (1) When joining six or more units, fix the middle part of the complete EX600 unit with an intermediate reinforcing brace (EX600-ZMB2) before mounting, using 2-M4 x 6 screws.

  Tightening torque: 0.7 to 0.8 N•m.
- (2) Mount the end plate bracket (EX600-ZMA2) to the end plate at the opposite end to the valves, using 2-M4 x 14 screws.

Tightening torque: 0.7 to 0.8 N·m.

- (3) Hook the DIN rail mounting groove on to the DIN rail.
- (4) Press the manifold using its side hooked to the DIN rail as a fulcrum until the manifold is locked.
- (5) Fix the manifold by tightening the DIN rail fixing screws of the EX600-ZMA2. (M4 x 20) Tightening torque: 0.7 to 0.8 N•m.
  - The tightening torque at the valve side depends on the valve type.

Refer to the operation manual of the corresponding valve manifold.

#### Precautions for handling

•When joining six or more units, fix the middle part of the units with an intermediate reinforcing brace to prevent connection failure between the units due to deflection.

# ■Wiring

- •Connect the M12 or M8 connector cable. M12 SPEEDCON connector connection method is explained below.
- (1) Align mark B on the metal bracket of the cable connector (plug/socket) with mark A.
- (2) Align with mark C on the unit and insert the connector vertically. If they are not aligned, the connector cannot be connected correctly.
- (3) When mark B has been turned 180 degrees (1/2 turn), wiring is complete. Confirm that the connection is not loose. If turned too far, it will become difficult to remove the connector.

#### Identification marker

The signal name of the input or output devices and unit address can be written on the marker, and can be installed on each unit.

Mount the marker (EX600-ZT1) into the marker groove as required.

# SI unit

# **Model Indication and How to Order**

# **Summary of Product parts**

| No. | Description                 | Function  |
|-----|-----------------------------|---|
| 1   | Status display LED          | Displays the status of the unit.                            |
| 2   | Display cover               | Open to access the setting switches.                        |
| 3   | Display cover screw         | Screw to open the display cover.                            |
| 4   | Connector (BUS OUT)         | Connecter for Fieldbus outputs.                             |
| 5   | Marker groove               | Groove for an identification marker.                        |
| 6   | Connector (PCI)             | Connecter for Handheld Terminal.                            |
| 7   | Valve plate mounting hole   | Holes for fixing the valve plate.                           |
| 8   | Valve plate mounting groove | Groove for mounting the valve plate.                        |
| 9   | Joint bracket               | Bracket for joining to adjacent units.                      |
| 10  | Unit connector (Plug)       | Connector for signals and power supplies to adjacent units. |
| 11  | Connector (BUS IN)          | Connecter for Fieldbus inputs.                              |
| 12  | Seal cap (2 pcs.)           | Fitted to unused connectors (BUS OUT and PCI).              |

# oConnector pin assignment and circuit diagram

#### Connector pin assignment

| Configuration   |                                       | Din number | Cianal name |
|---|---------------------------------------|------------|-------------|
| BUS IN  | BUS OUT                               | Pin number | Signal name |
| 2 1   | 1 2                                   | 1          | DRAIN       |
| $ \begin{bmatrix} 2 & 0 & 0 \\ 5 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} $ | 2                                     | V+         |             |
|   | $\begin{pmatrix} 5 \\  \end{pmatrix}$ | 3          | V-          |
|   |                                       | 4          | CAN_H       |
| 3 4   | 4 0 3                                 | 5          | CAN_L       |

<sup>\*:</sup> This unit is provided with a BUS OUT connector.

If you are concerned about disruption of "downstream" device whilst replacing the SI unit, use a DeviceNet® tap rather than marking connections to the BUS OUT connector.

(Connect using the BUS IN connector only.)

#### Circuit diagram

The product has T branching internally in the unit as shown in the circuit diagram below. It can be extended by connecting the DeviceNet® slave with BUS OUT.

## Precautions for handling

- •Be sure to fit a seal cap on any unused connectors. Proper use of the seal cap enables the enclosure to achieve IP67 specification.
- •Please connect the terminator with both ends of the DeviceNet® trunk line.

# **Setting and Adjustment**

- Switch setting
- (1) Loosen the display cover screw.
- (2) Open the display cover using a flat head screwdriver, etc.

- (3) Set the switch using a small watchmaker's screwdriver with a thin blade, referring to the setting of switch on the following pages.
- (4) After setting the switch, tighten the display cover tightening screw in the reverse order of the above procedure.

(Tightening torque: 0.3 to 0.4 N•m)

## Precautions for handling

- •Turn OFF the power supply whilst setting the switch.
- •If there is foreign matter or water droplets around the display cover, clean it off before opening the
- •When setting the switch, do not touch other unrelated parts. This can cause parts damage or malfunction due to a short circuit.
- •All default settings are OFF or 0. Perform the setting of the switch before using this product.
- •When introducing power supply, switch setting will become effective.

•Address setting/Data Rate switch: Sets the DeviceNet® node address and Data Rate.

Settings1

Address setting switch (x10): Sets the 10 digit of the DeviceNet® node address. Address setting switch (x1): Sets the 1 digit of the DeviceNet® node address. Data Rate switch: Sets DeviceNet® communication speed.

## Address setting

| Address |    | Node Address        |
|---------|----|---------------------|
| x10     | x1 | Node Address        |
| 0       | 0  | 0 (Default setting) |
| 0       | 1  | 1                   |
| 0       | 2  | 2                   |
| :       | :  | :                   |
| 6       | 2  | 62                  |
| 6       | 3  | 63                  |
| 6       | 4  |                     |
| :       | :  | PGM*                |
| 9       | 9  |                     |

## Data Rate setting

| Data Rate | Communication speed        |
|-----------|----------------------------|
| 0         | 125 kbps (Default setting) |
| 1         | 250 kbps                   |
| 2         | 500 kbps                   |
| 3         |                            |
| :         | PGM*                       |
| 9         |                            |

<sup>\*:</sup> When PGM is set, the data rate is set via DeviceNet® network. Turn ON HW/SW switch for setting.

•Diagnostics switch: Allocates the diagnostic data to the input data.

Settings1

| Setti | ngs1 | Mada | Contact   | Diagnostic size set |  |
|-------|------|------|---|---------------------|--|
| 1     | 2    | Mode | Content   | for the input       |  |
| OFF   | OFF  | 0    | Input data only (Default setting)                               | 0 byte              |  |
| OFF   | ON   | 1    | Input data + System diagnosis 4 byte                            |                     |  |
| ON    | OFF  | 2    | Input data + System diagnosis + Unit diagnosis (Up to 10 units) | 6 byte              |  |
| ON    | ON   | 3 *  | Input data + System diagnosis + Unit diagnosis (Up to 64 units) | 12 byte             |  |

<sup>\*:</sup> Mode 3 is a function for extension in the future. Do not use it now.

•HOLD/CLEAR switch: Sets the output status when the Fieldbus has a communication error or is in idling

| Settings1 | Contact                          |  |
|-----------|----------------------------------|--|
| 3         | Content                          |  |
| OFF       | Output is OFF. (Default setting) |  |
| ON        | Holds the output.                |  |

<sup>\*:</sup> Refer to "Parameter setting" (page 54), for the further details.

•HW/SW switch: Select the selection method of the Fieldbus address and Data Rate.

| Settings1 | Content   |
|-----------|---|
| OFF       | Address and Data Rate are set by the SI unit switch. (Hardware) (Default setting) |
| ON        | Address and Data Rate are set via the PLC. (Software) *                           |

<sup>\*:</sup> In order to set software via network, set the address or Data Rate switch to PGM.

•V\_SEL switch: A function to select the number of occupied valve outputs.

The number of outputs (size) occupied by the SI unit is selected.

| Settings1 |     | Comtont                       | Clausit sutput data sina |  |
|-----------|-----|-------------------------------|--------------------------|--|
| 5         | 6   | Content                       | SI unit output data size |  |
| OFF       | OFF | Number of valves = 32 outputs | 4 byte (Default setting) |  |
| OFF       | ON  | Number of valves = 24 outputs | 3 byte                   |  |
| ON        | OFF | Number of valves = 16 outputs | 2 byte                   |  |
| ON        | ON  | Number of valves = 8 outputs  | 1 byte                   |  |

<sup>\*:</sup> Set the number of occupied valve outputs to at least the number of valves used.

•QuickConnect™ switch: Sets whether QuickConnect™ for DeviceNet® is enabled.

Settings1

| Settings1 | QuickConnect <sup>TM</sup> | Content  |
|-----------|----------------------------|--|
| OFF       | Invalid (Default setting)  | QuickConnect <sup>™</sup> depends on Software.                                     |
| ON        | Valid                      | QuickConnect <sup>™</sup> is enable irrespective of the configuration by Software. |

- Precautions for handling
- •Handle the switch with care excessive force can break the switch.
- •Switches of No. 8 on the Setting1 switch is not use.

# **LED Display**

The status display LED displays the power supply and communication status. Various kinds of status can be checked as follows:

| Display | Content  |  |
|---------|--|--|
| ST(M)   | Displays the diagnostic status of the unit.                            |  |
| PWR     | Displays the status of the power supply voltage for control and input. |  |
| PWR(V)  | Displays the status of the power supply voltage for outputs.           |  |
| MS      | Displays the module status.  |  |
| NS      | Displays the network status.   |  |

## •SI unit common status

| LED display  | Content  |
|--|--|
| ST(M) PWR PWR(V) OFF.  | The power supply for control and input is OFF.   |
| ST(M) PWR PWR(V)  Green LEDs are ON.                           | The unit is in normal operation.   |
| ST(M) PWR PWR(V)   | A component failure inside the SI unit.  |
| ST(M) PWR PWR(V)  ○ ● ○  Red PWR LED is ON.                    | The power supply voltage for control and input is abnormal.  |
| ST(M) PWR PWR(V)  ○ ○ ●  Red PWR(V) LED is ON.                 | The power supply voltage for outputs is abnormal.  |
| ST(M) PWR PWR(V)  Green ST(M) LED is flashing.                 | A unit other than the SI unit has been detected.   |
| ST(M) PWR PWR(V)  Red ST(M) LED is flashing.                   | Either of the following conditions:  •The valve ON/OFF counter has exceeded the set value.  •The valve is short circuited or disconnected. |
| ST(M) PWR PWR(V)  Red/Green ST(M) LED is flashing alternately. | Connection error between units has occurred.   |

 $<sup>\</sup>ast$ : Refer to "Ttroubleshooting" (page 45), for the further details of countermeasures.

# •DeviceNet® status

| LED display  | Content   |  |
|--|---|--|
| MS NS O OFF.   | The power supply for control and input is OFF.  |  |
| MS NS  Creen MS LED is ON and  NS LED is OFF.  | Either of the following conditions:  •Checking the node address.  •Communication error.   |  |
| MS NS  | Communication is normal.  |  |
| MS NS Green MS LED is ON and Green NS LED is flashing.   | Connection is not established.  |  |
| MS NS  | A component failure inside the SI unit.   |  |
| MS NS  | Fatal communication error. (Check the following items, and restart.)  •Check/correct the node address.  •Check if the communication speed of PLC is the same as that of the slave. If they are not the same, correct them.  •Check proper length of the cable.  •Check the communication cable is not disconnected or loose.  •Ensure that the terminal resistor is mounted properly. |  |
| MS NS Green MS LED is ON and Red NS LED is flashing.   | Minor communication error. (Check the following items, and restart.)  •Check if the communication speed of PLC is the same as that of the slave.  If they are not the same, correct them.  •Check proper length of the cable.  •Check the communication cable is not disconnected or loose.  •Ensure that the terminal resistor is mounted properly.                                  |  |
| MS NS  MS | Flashes when performing self diagnosis test when the power supply starts.   |  |

<sup>\*:</sup> Refer to "Ttroubleshooting" (page 45), for the further details of countermeasures.

## PWR OUT: M12 5-pin Socket A-coded

| Configuration | Pin No. | Signal name         |  |
|---------------|---------|---------------------|--|
|               | 1       | 24 V (Output)       |  |
|               | 2       | 0 V (Output)        |  |
| 1002          | 3       | 24 V                |  |
| (50)          |         | (Control and input) |  |
| 4 0 0/3       | 4       | 0 V                 |  |
|               |         | (Control and input) |  |
|               | 5       | Not used            |  |

- Regarding the 2 types of power supply
- •Power supply for control and input: Supplying power for control of each unit's power supply for control and also for device connected to input port of Digital and Analogue unit.
- •Power supply for output: Supplying power for equipment connected to output port of Digital and Analogue unit, and also power supply for solenoid valve manifold.

## Precautions for handling

Be sure to fit a seal cap on any unused connectors. Proper use of the seal cap enables the enclosure to achieve IP67 specification.

# **Maintenance**

Turn OFF the power supply, stop the supplied air, exhaust the residual pressure and verify the release of air before performing maintenance.

# **Cleaning method**

Use a soft cloth to remove stains.

For heavy stains, use a cloth soaked with diluted neutral detergent and fully squeezed, then wipe up the stains again with a dry cloth.

Do not use solvents such as benzene, thinner etc. to clean each unit.

| Inspection item                      | Content of inspection   |
|--------------------------------------|---|
| Connector/Electric wiring            | Connect properly if the connection is loose.  |
| Seal cap                             | Tighten properly if the connection is loose.  |
| Thread for mounting and installation | If the thread is loose, re-tighten it to the specified torque.  |
| Connection cables                    | If the cable is broken or any other abnormality is confirmed by appearance, replace the cable with a new one. |
| Supply source voltage                | Check if source voltage within the specification range (24 VDC±10%) is supplied.                              |

### How to reset the product for power cut or forcible de-energizing

Supply power to the product.

The output status just before the power failure is not maintained when power supply is recovered. Start operation after confirming safety of the entire equipment.

# **Troubleshooting**

#### Troubleshooting

When any failure happens with this fieldbus system, the following chart is used to identify the cause of the failure.

Error status is reflected from the parameter setting of the fieldbus system.

When a failure occurs, take the appropriate countermeasures referring to the LED display, the troubleshooting and the parameter setting.

If a cause applicable to the failure cannot be identified, it indicates that the fieldbus system itself is broken. The fieldbus system breakage can be caused by the operating environment. Contact SMC separately to obtain countermeasures.

#### •Trouble counter measure method

# **Parameter Setting**

The product has parameters that can be set for the system, each unit or each channel.

The parameters can be changed using the PLC and H.T.

There is no order of precedence of the PLC and H.T. The latest parameter settings are used.

#### Precautions for handling

- •Changing parameters with the H.T. does not change the parameter settings in the PLC.
- •If DeviceNet® parameters are downloaded from the configurator to the PLC after changing parameters with the H.T., parameters will be changed to those which are set by the configurator. Therefore, set parameters by PLC if the parameters can be changed by both PLC and H.T.

#### ■Parameter definition and setting

- \*1: Disconnection detection is a function only available for digital unit (EX600-DXPC1, EX600-DXNC1) with disconnection detection.
- \*2: 2-wire type input equipment cannot be correctly detected if its leakage current is 0.5 mA or less while the equipment is in the OFF state (Reed sensor, etc.).

Ensure that all input equipment used has a leakage current above 0.5 mA in the OFF state.

3-wire type input equipment cannot be correctly detected if its current consumption is  $0.5\ \text{mA}$  or less.

The open circuit of input signals cannot be detected.

- \*3: The count is memorized every hour. When the power supply is turned ON again, counting starts from the last value memorized.
- \*4: Times for setting is set value x1000 times.
- \*5: It is possible to set it only with DeviceNet® extended object library 2.

|      | idling *2 *3<br>(Idle_MD)   | communication idling.   | ForceON | Turn ON the output forcefully.  |         | .0        |               |
|      | Output<br>ON/OFF            | Memorizes the number of times the output device is ON. Generates              | Enable  | Generates an error.<br>Val: 1 to 65000 *5   |         | Δ         |               |
| 6    | counter<br>(Counter)        | error per channel<br>when the operation<br>count exceeds the<br>set value. *5 | Disable | Does not generate an error.   | 0       | *6        | 0             |

<sup>\*1:</sup> Could be incorrectly recognized as short circuit depending on used load (ex.: lamp load). If detection is incorrect, disable the parameter setting.

<sup>\*2:</sup> This function is valid only when "Hold/Clear priority" of the system parameter is set to H.T.

<sup>\*3:</sup> Some PLC does not support an idle mode.

<sup>\*4:</sup> The count is memorized every hour. When the power supply is turned ON again, counting starts from the last value memorized.

<sup>\*5:</sup> Times for setting is set value x1000 times.

<sup>\*6:</sup> It is possible to set it only with DeviceNet® extended object library 2.

<sup>\*2:</sup> Set value shall be set per analogue output range within settable range in the table below. When the analogue output range is changed, check the set value and change it to an appropriate value.

# **Hardware Configuration**

#### ■EDS file and icon

EDS file is required to configure the EX600. Furthermore, icons are necessary for the display icon of the EX600 on the configure. The EDS File and icon can be downloaded from the URL given below.

# ■Setting using RSNetWorx for DeviceNet®

Below is an explanation of the EX600 Series connection method with a Rockwell Automation' DeviceNet® module.

Refer to the manual of RSNetWorx for DeviceNet® for a detailed manner of operation.

- \*: The screen data shown here is the English version of RSNetWorx for DeviceNet® verion 5.00.00.
- •EDS file install
- (1) Start RSNetWorx for DeviceNet®.
- (2) Select [EDS Wizard] from [Tools].
- (3) The EDS file and the icon are installed.

(4) EX600-SDN# is registered to the folder of DeviceNet®¥Vendor¥SMC Corporation¥Communication Adapter on the [Hardware screen].

Or it is registered to the folder of DeviceNet®¥Category¥Communication Adapter.

\*: Even if the EDS file for EX600-SDN#A is installed, it is displayed as EX600-SDN# on the [Hardware screen].

- Registration to the network
- (1) Double click EX600-SDN# on the [Hardware screen].
- (2) The icon of EX600-SDN# is displayed on the [Network screen].

- Address setting of EX600
- (1) Double click EX600-SDN# on the [Network screen].
- (2) [EX600-SDN# property screen] is displayed. Input DeviceNet® address, and click on [OK].

- Setting of the scan list
- (1) Double click the scanner icon on the [Network screen].

- (2) [1756-DNB/A property screen] is displayed. Click the [Scanlist] tab.
- (3) Select EX600-SDN# in [Available Devices;], and click on the [>] button.

- Setting of I/O parameters
- (1) Double click the EX600-SDN# on the [Scanlist;].
- (2) [Edit I/O parameters screen] is displayed. Input I/O Parameters, and click on [OK].

\*: Please leave unticked the "Strobed" and "Change of State/Cyclic" tick boxes. These functions are not supported.

# I/O Map

Each unit of the product has its own.

| Unit                  | Unit part number                                     | Occupied byte           |                         |  |
|-----------------------|--|-------------------------|-------------------------|--|
| Offic                 | Onit part number                                     | Input                   | Output                  |  |

## Diagnostic

By changing the diagnostic switch, the diagnostic data shown below is assigned to the head of input data of the input/output map. (Refer to "Setting and Adjustment" (page 19) for setting the switch.)

| Mode | Diagnostic Data                                    | Diagnostic Size |  |
|------|--|-----------------|--|
| 0    | No diagnostic data.                                | 0 byte          |  |
| 1    | System diagnosis                                   | 4 byte          |  |
| 2    | System diagnosis + Unit diagnosis (Up to 10 units) | 6 byte          |  |
| 3    | System diagnosis + Unit diagnosis (Up to 64 units) | 12 byte         |  |

- \*: Diagnosis mode 3 is a function for extension in the future. Do not use it now.
- $\ast :$  Channel diagnosis cannot be assigned to the diagnosis area of the input.

#### •I/O map assignment

I/O map of EX600 is assigned in order starting from the unit on the end plat side.

Taking the unit layout below as an example, the input/ output map of each diagnosis mode is shown below.

|              | Unit 0          | Unit 1            | Unit 2            | Unit 3           | Unit 4           | Unit 5                 |       |
|--------------|-----------------|-------------------|-------------------|------------------|------------------|------------------------|-------|
|              | AXA             | DY#B              | DY#B              | DX#B             | DX#D             | SDN#A                  |       |
| End<br>plate | Analogue input  | Digital<br>output | Digital<br>output | Digital<br>input | Digital<br>input | SI unit<br>(32 output) | Valve |
|              | 4 byte<br>Input | 1 byte<br>Output  | 1 byte<br>Output  | 1 byte<br>Input  | 2 byte<br>Input  | 4 byte<br>Output       |       |

Input data: Analogue input unit (EX600-AXA)\_4 byte occupied (Unit 0)

Digital input unit (EX600-DX#B)\_1 byte occupied (Unit 3)

Digital input unit (EX600-DX#D)\_2 byte occupied (Unit 4)

Output data: Digital output unit(EX600-DY#B)\_1 byte occupied (Unit 1)

Digital output unit (EX600-DY#B)\_1 byte occupied (Unit 2)

SI unit (EX600-SDN#A)\_4 byte occupied (Unit 5)

## ■Details of diagnostic data

### System diagnosis

### •System diagnosis byte0

| Bit No. | Content of diagnosis   |  |
|---------|--|--|
| 0       | The analogue value has fallen below the user's set value.                            |  |
| 1       | The analogue value has exceeded the user's set value.                                |  |
| 2       | The analogue input value has fallen below the set range.                             |  |
| 3       | The analogue input value has exceeded the set range.                                 |  |
| 4       | The counter has exceeded the set value.  |  |
| 5       | The open circuit has been detected.  |  |
| 6       | The short circuit of the valve output or digital output has been detected.           |  |
| 7       | The short circuit of the power supply for the input/output device has been detected. |  |

### System diagnosis byte1

| Bit No. | Content of diagnosis   |  |
|---------|--|--|
| 0       | The power supply voltage for output device is outside of the specification.            |  |
| 1       | The power supply voltage for control and input device is outside of the specification. |  |
| 2       | Reserved   |  |
| 3       | There is a connection failure between each unit (During operation).                    |  |
| 4       | There is a connection failure between each unit (When the power supply is applied).    |  |
| 5       | Reserved   |  |
| 6       | System error occurred.   |  |
| 7       | Hardware error occurred.   |  |

### •System diagnosis byte2

| Bit No. | Content of diagnosis |
|---------|----------------------|
| 0       | Reserved             |
| :       | :                    |
| 7       | Reserved             |

### System diagnosis byte3

| Bit No. | Content of diagnosis                              |  |
|---------|---|--|
| 0       | There is an error in the digital input unit. *1   |  |
| 1       | There is an error in the digital output unit. *1  |  |
| 2       | There is an error in the analogue input unit. *2  |  |
| 3       | There is an error in the analogue output unit. *2 |  |
| 4       | There is an error in the SI unit.                 |  |
| 5       | Reserved  |  |
| 6       | Reserved  |  |
| 7       | Reserved  |  |

- \*1: When the error occurs in the digital I/O unit, both Bit0 and Bit1 are turned ON.
- \*2: When the error occurs in the analogue I/O unit, both Bit2 and Bit3 are turned ON.

### •Unit diagnosis

### •Unit diagnosis byte0

| Bit No. | Content of diagnosis         |
|---------|------------------------------|
| 0       | There is an error in unit 0. |
| 1       | There is an error in unit 1. |
| 2       | There is an error in unit 2. |
| 3       | There is an error in unit 3. |
| 4       | There is an error in unit 4. |
| 5       | There is an error in unit 5. |
| 6       | There is an error in unit 6. |
| 7       | There is an error in unit 7. |

### Unit diagnosis byte1

| Bit No. | Content of diagnosis         |
|---------|------------------------------|
| 0       | There is an error in unit 8. |
| 1       | There is an error in unit 9. |

| 89h |                     |                     |         | Analogue average filter •Analogue I, I/O   | USINT | 0 = None<br>1 = 2 value average<br>2 = 4 value average<br>3 = 8 value average  |
| 8Ah |                     |                     |         | Analogue range •Analogue I, O, I/O   | USINT | 0 = -10+10  V<br>(Analogue input unit only)<br>1 = -5+5  V<br>(Analogue input unit only)<br>2 = -20+20  mA<br>(Analogue input unit only)<br>3 = 010  V<br>4 = 05  V<br>5 = 15  V<br>6 = 020  mA<br>7 = 420  mA |

<sup>\*1: 01</sup>h to 0Ah indicates the unit number 0 to 9.

<sup>\*2: 64</sup>h to 83h indicates the channel number 0 to 31.

### **Accessories**

For the selection of accessories, refer to the catalog.

(1) Valve plate

EX600-ZMV1

Enclosed parts: Round head screw (M4 x 6), 2 pcs. Round head screw (M3 x 8), 4 pcs.

EX600-ZMV2 (Specified for SY series)

Enclosed parts: Round head screw (M4 x 6), 2 pcs. Round head screw (M3 x 8), 4 pcs.

(2) End plate bracket

EX600-ZMA2

Enclosed parts: Round head screw (M4 x 20), 1 pc.

P tight screw (4 x 14), 2 pcs.

EX600-ZMA3 (Specified for SY series)

Enclosed parts: Round head screw (M4 x 20) with washer, 1 pc.

P tight screw (4 x 14), 2 pcs.

(3) Intermediate support bracket

EX600-ZMB1...for direct mounting

Enclosed parts: Round head screw (M4 x 5), 2 pcs.

EX600-ZMB2...for DIN rail mounting

Enclosed parts: Round head screw (M4 x 6), 2 pcs.

(4) Seal cap (10 pcs.) EX9-AWES...for M8 EX9-AWTS...for M12

(5) Marker (1 sheet, 88 pcs.) EX600-ZT1

(6) Y Junction connector PCA-1557785 2 x M12 (5-pin) – M12 (5-pin)

#### (7) Assembled type connector

PCA-1578078 for power supply, 7/8 inch, Plug, Cable O.D. 12 to 14 mm PCA-1578081 for power supply, 7/8 inch, Socket, Cable O.D. 12 to 14 mm PCA-1075528 for DeviceNet® communication, Plug

PCA-1075529 for DeviceNet® communication, Socket

PCA-1557730 M8 (3-pin), Plug

PCA-1557743 M12 (4-pin), Plug, for AWG26 to AWG22 PCA-1557756 M12 (4-pin), Plug, for AWG22 to AWG18

#### (8) Power supply cable

PCA-1558810 Cable with 7/8 inch connector, Socket, Straight 2 m PCA-1558823 Cable with 7/8 inch connector, Socket, Straight 6 m PCA-1558836 Cable with 7/8 inch connector, Socket, Right angle 2 m PCA-1558849 Cable with 7/8 inch connector, Socket, Right angle 6 m PCA-1564927 Cable with M12 connector, B-coded, Socket, Straight 2 m PCA-1564930 Cable with M12 connector, B-coded, Socket, Straight 6 m PCA-1564943 Cable with M12 connector, B-coded, Socket, Right angle 2 m PCA-1564969 Cable with M12 connector, B-coded, Socket, Right angle 6 m

#### (9) DeviceNet® communication cable

PCA-1557633 Cable with M12 connector, A-coded, Socket, Straight 5 m PCA-1557646 Cable with M12 connector, A-coded, Plug, Straight 5 m

#### (10) Connector extension cable

PCA-1557769 M12 (4-pin), Straight 3 m PCA-1557772 M8 (3-pin), Straight 3 m
