

Mist Separator

Series AM

Series AM can separate and remove oil mist in compressed air which is difficult to remove by ordinary air filters and remove solid particles such as rust or carbon of more than 0.3μm. It is the most suitable for air sources that drive pilot, metal seal solenoid valves.

Model

Model	AM150	AM250	AM350	AM450	AM550	AM650	AM850
Rated flow (l/min (ANR)) ⁽¹⁾	300	750	1500	2200	3500	6000	12000
Port size (Nominal size B)	1/8, 1/4, 3/8	1/4, 3/8, 1/2	3/8, 1/2, 3/4	1/2, 3/4, 1	3/4, 1	1, 1 1/2	1 1/2, 2
Weight (kg)	0.38	0.55	0.9	1.4	2.1	4.2	10.5

Note 1) Max. flow capacity at a pressure of 0.7MPa. It varies depending on operating pressure. Refer to "Flow Characteristics" (p.4.5-2) and figure of "Max. air flow" (p.4.5-3).

Specifications

Fluid	Compressed air
Max. operating pressure	1.0MPa
Min. operating pressure ⁽¹⁾	0.05MPa
Proof pressure	1.5MPa
Ambient and fluid temperature	5 to 60°C
Filtration	0.3μm (95% particle size collection)
Oil mist removal rate	Max.1.0mg/m ³ (ANR) (≒0.8ppm) ⁽²⁾
Element life	2 years or when pressure drop reaches 0.1MPa

Note 1) With Auto drain: 0.15MPa

Note 2) At oil mist removal rate blowing compressor is 30mg/m³(ANR) (ANR)

Flow Characteristics

Element oil saturation

Note) Compressed air over max. flow line in the table below may not meet the specification of product.
It may cause damage to the element.

- ③ When using the type with a drain valve, drain guide, or a ball valve, discard the drainage before the drainage level reaches the center of the sight glass. If the drainage is not discarded properly, it will flow to the secondary side.

⚠ Precautions

Be sure to read before handling.
Refer to p.0-26 and 0-27 for Safety Instructions and common precautions on the products mentioned in this catalogue, and refer to p.4.0-5 to 4.0-7 for more detailed precautions of every series.

Design

⚠ Caution

- Design the layout so that the mist separator is installed in an area that is less susceptible to pulsations. The element could be damaged if the difference in internal and external pressures exceeds 0.1MPa.
- When using the auto drain, connect the drain piping in the following range:
Normally closed (N.C.) }
Normally open (N.O.) }
Because tube fittings are provided, use a tube with a bore of 10mm, and keep the overall pipe length within 5m.
AM850 type (N.O.)
Use a tube with a bore of 9mm or more, and keep the overall pipe length within 2.8m.
If the normally open (N.O.) auto drain is used, because it is designed so that the valve will not open unless the air pressure is 0.15MPa or higher, air could continue to blow out of the drainage discharge area if an air compressor with a small air discharge volume is used. Therefore, when using a compressor that is smaller than 3.7kW, make sure to use the normally closed (N.C.) auto drain.
- The bracket that is provided with the product is for supporting the product itself. Thus, it cannot support the piping or other items that are connected. If these items need to be supported, provide an additional support.

Mounting

⚠ Caution

- Verify the direction of the flow of the compressed air and the "▶" mark that indicates the inlet of the product before connecting. It cannot be used if connected in the opposite direction.

- Make sure to install this product on horizontal piping. If it is installed diagonally, laterally, or upside down, the drainage that is separated by the element will splash to the secondary side.

Maintenance

⚠ Caution

- The replacement interval for the element is when the pressure drop reaches 0.1MPa or after 2 years of operation, whichever comes first. A pressure drop can be verified with the type with a clogging checker (-T) or with the type with a pressure differential gauge (Made to Order).
- When the element has reached its replacement interval, replace it immediately with a new element. Replace the O-ring, the gasket, and the element with new parts. For note ③, refer to the left.

Max. Air Flow

Max. Flow

How to Select

Select the model in accordance with the following procedure taking the inlet pressure and max. air flow into consideration.

(Example) Inlet pressure: 0.6MPa

Max. air flow capacity: 5m³/min.(ANR)

① Select the point of contact A of inlet pressure and max. air flow capacity in the graph.

② Select the type whose max. air flow capacity is over that point; AM650.

Note) Make sure to select a model that has the maximum flow rate line above the obtained intersecting point. With a model that has the maximum flow rate line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.
