Remote Control Valve

(Electric speed controller)

The speed controller is equipped with a motor

Speed controller capable of "remote control" by "electrification"

Large reduction in equipment setup time and downtime

Remote control

The actuator speed and device flow rate can be adjusted "from a remote location," "without going to the site," and "without stopping the device."

Electrification

Adjustment is possible without manual work and simultaneously

Easy, simple operation

- Set-up can be made quantitatively using electrical control.
- Opens and closes with one electrical signal pulse
- Simply input the flow rate UP/DOWN signal from a PLC or touch panel.
- No dedicated controller or PLC positioning unit is required, making installation easy.

Select input pulse according to needle control angle.

Needle	Input pulse		Fully closed \Rightarrow Fully open (5.5 turns)	
control angle.	Pulse width	Pulse period	Number of pulses required	Time required
5°	50 ms	0.7 s	396 times	277.2 s
30°	0.5 s	1.2 s	66 times	79.2 s
180°	1.0 s	2.2 s	11 times	24.2 s

* Take care about the number of consecutive operations (refer to p. 14).

Pin No.	Wire color	Pin Assignment
1	Brown	DC + (24 V ±10 %)
2	White	NPN or PNP input… flow rate UP
3	Blue	DC – (0 V)
4	Black	NPN or PNP input… flow rate DOWN

2

Needle valve

Knob

Push: Auto Adjust (remote control) Pull: Manual adjustment (remote control lock)

Built-in Step motor

Adjusts the needle valve angle in increments of 5° , 30° , and 180° according to the external input signal (open loop control).

Knob operation

• If electrical signals cannot be sent immediately, on-site manual adjustment is possible using the knob.

(Conventional equipment startup is also possible)

The needle valve angle is maintained even when the power is turned OFF.

• The needle valve angle does not change even before and after power failure, so readjustment is not required when restarting.

ſ

• Once the needle valve angle is set, no power supply is required, allowing for energy saving.

Grease-free

Remote Control Valve (Electric speed controller) PFES Series

Application Examples

Adjusting actuator speed in difficult environments.

• Remote adjustment results in easy maintenance.

Difficult working environments

Ex. Incorporated Equipment/Limited maintenance space

Difficult to access environments

SMC

Application Examples

Infrequent changeovers / simple flow rate adjustments

• Increased productivity by making equipment / lines more versatile

Actuator speed Adjustment

Blow/Purge flow rate adjustment

(Prevent carry transmission error/workpiece blowout)

Ex. Adjusts clamp speed according to the wood thickness in wood working machinery. (Prevent clamp fault/workpiece deformation)

Remote Control Valve (Electric speed controller) PFES Series

Application Examples

Electrical flow regulation for repeatable control

• Eliminates manual work, reduces adjustment man-hours, and reduces equipment downtime

Adjustment of the operating air flow rate for fluid control equipment

Adjustment of vacuum ejector supply / burst air flow

 Reduced human error and improved production quality / automation of equipment and labor saving.

Adjustment without manual intervention

Application Examples

Adjustment according to operating conditions

Contributes to efficient production and air saving measures

Improving equipment efficiency

Saving air consumption over time

Bulk configuration and centralized management of multiple devices

• Bulk settings / centralized control reduces adjustment work hours and equipment downtime

Setting / management via touch panel and PLC

Remote Control Valve (Electric speed controller) **PFES Series**

Accessories / Part Numbers

When optional parts are required separately, use the following part numbers to place an order.				
Description	Part number	Note		
Lead wire with M12 connector Straight	ZS-37-A	Lead wire length 3 m		
Bracket	ZS-58-A	Self-tapping screw: Nominal size 3 x 6 L (4 pcs.)		

Specifications

Fluid	Applicable fluid	Air (JIS B8392-1: 2012 [6.6.5], ISO8573-1: 2010 [6.6.5])		
	Fluid temperature range	0 to 50 °C		
Pressure	Rated pressure range	0.1 to 0.8 MPa		
	Withstand pressure	1.5 MPa		
Ele etricel	Power supply voltage	24 VDC ±10 %		
Electrical	Current consumption	Standby: 13 mA or less, Operation: 530 mA or less		
Control specification	Input type	NPN PNP		
	Input current	1 mA or less		
	Needle control angle	5° (above 50 ms, below 0.5 s), below 0.5 s		
	(signal input time) Response time	30° (above 0.5 s, below 1.0 s), below 1.0 s		
		180° (1.0 s or more), 2.0 s or less		
	UP (+)	LED is ON when needle is rotating (Green)		
Display (LED)	POWER	LED is ON when power supply is ON (amber)		
	DOWN (–)	LED is ON when needle is rotating (Green)		
Standards		CE / UKCA		
Environment	Operating temperature range	0 to 50 °C		
	Enclosure rating	IP40		
	Materials of parts in contact with fluid	PBT, Brass (Electroless nickel plating), FKM, Urethane rubber		

PFES Series

Flow Rate Characteristics

PFES1001R (0.5 MPa)

PFES3002R (0.5 MPa)

PFES2002R (0.5 MPa)

Input Pulse Count and Number of Knob Rotations

Needle Control Angle: 5°

Needle Control Angle: 180°

* The dotted lines on the graph are reference values. (Fully closed \Leftrightarrow Fully open: approx. 5.5 turns)

Accessory part number: ZS-37-A

② Bracket

Accessory part number: ZS-58-A

③ Lead Wire with M12-M12 Connector

SMC

Accessories **PFES** Series

④ T-branch Connector

(5) Fieldwireable Connector (M12 plug)

PCA-1557756

6 Lead Wire with M12 Connector (Plug)

Item	Specifications	
Cable O.D.	Ø 6.6 mm	
Conductor nominal cross section	0.3 mm ² /AWG22	
Wire O.D. (Including conductor)	1.65 mm	
Min. bending radius (Fixed)	40 mm	

PFES Series

*1 Be sure to use a common power GND for the PFES and EX600-ED.

*2 Connect terminal no. 1 and 3 to DC (+) and DC (-) respectively, and leave terminal no. 2 and 4 unconnected.

*3 Connect terminal no. 2 and 4, and leave terminal no. 1 and 3 unconnected.

*4 Note that due to the EX600-ED end plate specifications, the wiring specifications will vary.

PFES Series Specific Product Precautions

Be sure to read this before handling the products. Refer to the back cover for safety instructions. For flow control equipment precautions, refer to the "Handling Precautions for SMC Products" and the "Operation Manual" on the SMC website: https://www.smc.eu

Design/Selection

- **1. Cannot be used as a stop valve.** Zero leakage is not guaranteed.
- 2. When power supply is turned OFF, knob does not return to closed position.

The aperture open / close does not change even when the power is turned OFF.

The aperture open / close angle will not change before or after a power failure.

3. Do not use for applications which require constant operation, such as controlling the flow rate by feeding back the flow rate value.

This may accelerate age deterioration and may result in a failure.

4. When performing continuous operation, do not exceed the continuous input pulse count upper limit. If you wish to exceed the upper limit of the consecutive input pulse count, provide a signal input interval.

Continuous input pulse count upper limit

Signal input interval

5. Knob operation

Forcing the manual knob to turn may result in a failure. From fully closed to fully open takes 5.5 turns. The aperture is set to 1.5 turns open from the fully closed position when shipped from the factory.

6. Do not turn input control signal when pressure exceeds 0.8 MPa.

The needle may not turn rotation.

If workload weight is heavy in vertical use case of cylinder, meter-out control may have a higher exhaust's back pressure than supply pressure when cylinder go down. In such cases, turn input control signal while cylinder is stopped. And cylinder output force of descent direction can be reduced by a pressure regulator with a reverse-current function to reduce back pressure.

Operating Life

The operating lifetime of this product is under the following conditions.

(1) Target operation: Fully closed \rightarrow Fully open \rightarrow Fully closed *(to the end)

Operating lifetime: 10,000 operations (reference value) **Operating pressure**: 0.2 MPa constant

Ambient temperature: 20 to 25 °C

(2) Target operation: Open and closed in the middle open range.
 Operating lifetime: 300,000 operations (reference value)
 Operating pressure: 0.2 MPa constant
 Ambient temperature: 20 to 25 °C

\wedge	Safety I	nstructions	These safety instructions damage. These instructions	are intended to prevent hazardous situations and/or equipment ons indicate the level of potential hazard with the labels of
			"Caution," "Warning" of followed in addition to In	or "Danger." They are all important notes for safety and must be ternational Standards (ISO/IEC) ¹⁾ , and other safety regulations.
	Danger:	Danger indicates a hazard with which, if not avoided, will result injury.	h a high level of risk t in death or serious	 ISO 4414: Pneumatic fluid power – General rules and safety requirements for systems and their components. ISO 4413: Hydraulic fluid power – General rules and safety requirements for systems and their components.
	Warning:	Warning indicates a hazard wi which, if not avoided, could re- injury.	ith a medium level of risk sult in death or serious	IEC 60204-1: Safety of machinery – Electrical equipment of machines (Part 1: General requirements) ISO 10218-1: Robots and robotic devices - Safety requirements for industrial robots - Part 1: Robots.
	Caution:	Caution indicates a hazard wit which, if not avoided, could res	th a low level of risk sult in minor or moderate	etc.

∧ Warning

injury.

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications. Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- 3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - 1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - 2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Our products cannot be used beyond their specifications. Our products are not developed, designed, and manufactured to be used under the following conditions or environments. Use under such conditions or environments is not covered.

- 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
- 2. Use for nuclear power, railways, aviation, space equipment, ships, vehicles, military application, equipment affecting human life, body, and property, fuel equipment, entertainment equipment, emergency shut-off circuits, press clutches, brake circuits, safety equipment, etc., and use for applications that do not conform to standard specifications such as catalogues and operation manuals.
- 3. Use for interlock circuits, except for use with double interlock such as installing a mechanical protection function in case of failure. Please periodically inspect the product to confirm that the product is operating properly.

∧ Caution

We develop, design, and manufacture our products to be used for automatic control equipment, and provide them for peaceful use in manufacturing industries. Use in non-manufacturing industries is not covered.

Products we manufacture and sell cannot be used for the purpose of transactions or certification specified in the Measurement Act.

The new Measurement Act prohibits use of any unit other than SI units in Japan.

Limited warranty and **Disclaimer/Compliance** Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".Read and accept them before using the product.

Limited warranty and Disclaimer

- 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.²⁾ Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- 1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- 2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
