

3 Port Direct Operated Poppet Solenoid Valve Rubber Seal VK300 Series

Universal porting

Available for N.C. valve, N.O. valve, divider valve, selector valve, etc.

N/min: 196

Compact/Width 18 X Length 63 (mm)

Low consumption

4 W DC (Standard)

2 W DC (Low wattage style)

**Applicable for vacuum use
-101.2 kPa**

Copper-free specifications standard

The portions that come in contact with fluids do not contain copper, thus enabling the standard product to be used as is.

Regarding mixed installations

Series VK300 can be mounted on manifold base (VV5K3) of series VK3000.
Refer to p.1.4-4 for detailed information.

Model

* Value at single style. In case of manifold, it depends on operating conditions.

Specifications

Actuation	Direct operated style 3 port single solenoid
Fluid	Air
Ambient and fluid temperature	-5 to 50 °C (No freezing)
Response time (0.5 MPa) ⁽¹⁾	10 ms or less (standard), 15ms or less (low wattage)
Manual override	Non-locking push style
Lubrication	Non-lube (Use turbine oil # 1 ISO VG32, if lubrication is required)
Mounting position	Free
Impact/vibration resistance ⁽²⁾	300/50m/s ²
Protection structure	Dust proof

Note 1) According to dynamic performance test of JIS B8374- 1981. (Coil temperature 20 °C, rated voltage, without surge voltage suppressor)

Note 2) Impact resistance: No malfunction from test using drop impact tester, to axis and right angle directions of main valve and armature, each one time when energized and de-energized. (Value in the initial stage.)

Vibration resistance: No malfunction from test with 8.3 to 2000 Hz 1 sweep, to axis and right angle directions of main valve and armature, each one time when energized and de-energized. (Value in the initial stage.)

⚠ Precautions

Be sure to read before handling. Refer to p.0-33 to 0-36 for Safety Instructions and common precautions.

⚠ Caution

How to Use DIN Connector

Cut off the power and air supply before mounting/demounting the connector. Firmly execute lead wire and socket press-contacting and connector mounting.

- Loosen set screw and pull out connector from the terminal block of solenoid.
- Remove screw and insert screwdriver into the slit area near the bottom of terminal block to separate block and housing.
- Loosen terminal screw of terminal block, place bare end of lead wire into terminal in accordance with wiring methods, and affix it securely with the terminal screw.
- Tighten ground nut to secure the wire.

⚠ Caution

Use the cable (Ø 3.5 to Ø 7) for wiring to meet IP65 standards (protective construction). Tighten the ground nut and set screw with the specified range of torque.

•Change of electrical entry. (Orientation)

After separating terminal block and housing, mount housing at any position (total 4 directions, 90° degrees), therefore, changing electrical entry.

* In the case of indicator light, avoid damaging the light with the lead wire.

(In the case of a manifold, change in the direction of electrical entry is limited depending on the mounting position.)

•Precautions

Plug connector in or out vertically, never at an angle.

•Applicable cable

Cable O. D.: Ø 3.5 to Ø 7

(Reference) 0.5mm² 2 core and 3 core wires equivalent to JISC3306.

•Connector part no.: K31

	With light	NO.1 NO.2	Z

Precautions for wiring when using 24 VDC or higher: With the grommet style, connect the positive (+) side to the red lead wire and the negative (-) side to the black lead wire. With the DIN terminal, connect the positive (+) side to the connector's No. 1 terminal, and the negative (-) side to the No. 2 terminal. [Refer to the marks on the terminal board.]

* For 12 VDC or below, there is no positive (+) or negative (-) directionality.

•DIN terminal

Vacuum Use: VK33□V (VK33□W)

When mounting a valve on the manifold base or sub-plate, etc., the mounting orientation is already decided. If mounted in a wrong direction, the equipment to be connected may result in malfunction.

Refer to pages 2.3-5 to 2.3-9 for external dimensions in mounting.

⚠ Caution

- Because this valve leaks, it cannot be used for maintaining a vacuum (or pressure) in a pressure vessel.

Long Loading Style: VK33□E

This product is to be used for long time energisation.

⚠ Caution

- Because this is to be used for long loading, it is not for highly frequency use. Contact SMC if it is to be operated in excess of once a day, including low frequency operations.
- Make sure to switch it at least once every 30 days.

Flow Rate

Refer to the p.0-36 for flow rate.
